

Both bundles are on the skimpy side but you'd have to be a little barmy to expect something extra at this price point.

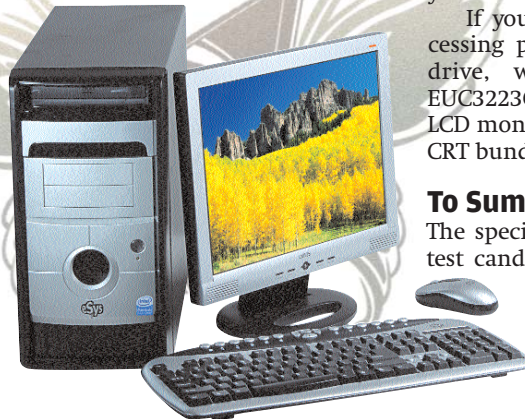

Performance Huh?

The eSys EUC3223CI outperforms the tiny AP361 both on paper and in practice, due to the huge difference in processing power—an AMD Sempron is no match for a dual-core Pentium processor. The AP361 has a capable ATI Xpress 200 graphics chipset, though—this will allow a variety of multimedia applications, though there's only 256 MB of system memory.

The EUC3223CI has double the system memory and double the storage space. This seems right, considering there's a 5,000-rupee price difference.

So...

The entry point to the world of computers is here! If you're extremely fund-shy and need a very basic PC to run office applications, dabble in a

eSys EUC3223CI
Good specs, great price!

little multimedia, surf the Net, or even as a second PC for downloading (an increasing trend), take a serious look at the exceptionally well-priced Acer AP361—Rs 13,799 with a whole one-year onsite warranty.

If you want a little more processing punch and a bigger hard drive, we'd suggest the eSys EUC3223CI. You'll also get a 15-inch LCD monitor instead of the 15-inch CRT bundled with the Acer.

To Sum It Up

The specifications on some of our test candidates were drool-worthy, but we expected more—especially from PCs priced at over a half-lakh rupees. For one, DX10 graphics cards, which cost below Rs

5,000. Another trend we'd like to see done and buried is the inclusion of tiny hard drives. There's absolutely no way a Desktop PC will cope with a family's storage needs with 80 or 160 gigabytes.

There's much to be appreciated though, like the inclusion of LCD monitors all round. Also, the inclusion of fast processors on cheaper PCs. Another heartening point was the *de facto* 512 MB of RAM.

In any case, if you want a Desktop PC without the headache of choosing components yourself, and running circles around dealers for support, take the branded way! ☒

Biometric enabled Labour Management System...

Security has become a paramount concern for any organization in the modern world. Physical security of the assets and the intellectual property protection has become a major challenge of any security department of an organization. Proper vigilance over the visitors, contractors, laborers, temporary employees is the first step towards achieving effective security in the organization. There are many temporary employees entering in an organization on a day to day basis. Normally these contract employees are hired from contractors. Usually the management of these employees is done through either a manual system like "Token System" or a partially automated system with access cards. There are many issues related to these systems.

Advantages of a Biometric enabled Labour Management System:

- Every labour gets a badge with photograph.
- Daily attendance with finger print authentication (optional).
- Maximum no of labour per contractor can be restricted and controlled.
- Any person can be authorized required a photograph & finger print.
- Repository of all labourers / temporary employees.
- In case of an accident or mishap all the details about the individual can be traced easily.
- Validity of the badge can be displayed prominently.
- Daily attendance sheets can be generated accurately.
- Allowed work timings are displayed on the badge and the same can be controlled.

That's why many companies like Accenture, Reliance Industries, Pfizer, Adani Logistics, Megaportal City and many more have standardized on ESM KIOSK.

Support: 867798 / 1907001-2005, HR/AN Compliance, ESM Enterprise version and Visitor Management System is also available.
