

In Theory And In Practice

Ram Mohan Rao

Students have it so much better these days...

www.sciencenews.org

Now this one isn't just "Incredibly Useful"—it's incredibly fascinating. Marvellous content here—pure science discovery and fun, totally cutting-edge.

"Saturn's strange moon Iapetus... has a ridge running along its equator. This feature and others of the walnut-shaped moon suggest that Iapetus has been frozen in time, giving astronomers a glimpse into the outer solar system's early development." If you enjoy and thrive upon such news, take one look at Science News Online and you'll be hooked.

Mind you, this one is not for the fritter-brained. If you'd like to know why dirt roads develop a "washboard" surface, if you need to know what computer scientists are doing to crack the Rubik's Cube puzzle—then and only then head here. Zero frills: they won't make things for you "kiddie-friendly" the way *The Discovery Channel* does.

After that intimidating warning, we must say the language itself is simple enough. A sampler: "Rubik's Cube has approximately 43 quintillion possible configurations. Even a supercomputer can't search through every possible configuration to find the quickest way..."

Many articles are subscriber-only, yes, but there's more free stuff than you have free time.

Quick links include archives for many years, a blog as rich as the main site, and one to the most viewed articles. In terms of navigation, you're best off starting at the Table of Contents link.

If you're smart enough (and you are, since you're a *Digit* reader), do take a quick look regardless of whether you consider yourself a science buff. You might just find you are.

The kind of visuals you can expect at Science Online

www.ephotozine.com

"A veritable Swiss Army Knife of a site, ePHOTOzine has everything a photographer could wish for." That's the quote they use, and we'll agree. Subscription is not necessary, but it allows you to access the forums and the competitions—as in upload *your* photos. You can keep them up for modification (!) so you know what your photo *could* be. And thus, you learn.

You'll also learn a lot at the forums: general photography techniques, techniques specific to digital photography, gadgets and models and such, image editing issues...

pretty much everything. And the competitions! Submit your photograph to pit it against some of the coolest, most breathtaking photos we've seen.

There are plenty of reviews, and buying advice

to boot. The reviews aren't limited to cameras—they span everything a photographer (budding or otherwise) might encounter, such as display devices.

The Techniques area is all about techniques—at least, a lot. Summer portraits? Landscapes? B&W in CS3? You name it, it's there.

Photographer or not, you'll want to go to the most obvious section—the photos. Looking at all that art, you'll want to learn the techniques, then you'll want to get the equipment, then you'll want to ask questions. Photos, Techniques, Buyers' guides, Reviews, Forums, competitions. That rounds off the picture—this *is* an all-in-one site. Don't be intimidated by all the photoman-speak... you'll get into it in no time.

"Holy Sheds" by "jeanie" at ePHOTOzine

www.managementhelp.org

No pretty boxes to click on at this site. The focus is management, but it's a loose focus. Much of what applies to that discipline applies elsewhere, too. There's also information for the would-be entrepreneur, people working with non-profits, and more. The material is geared towards student, teacher, and worker alike.

At the main page are a whole lot of links; actually, five thousand for the site—and e-books on 650 topics. At or close to the main theme are such topics as Interpersonal Skills,

The only visual relief here: book covers. You get recommendations for all the main topics

Organisational Change, and Employee Performance. In the middle ground, we have Group Skills, Coordinating, and Ethics & Social Responsibility. Now take a look at Creativity & Innovation, Problem Solving / Decisions, and Communications (Writing)—and you know you can use this site even if you don't know the M of management.

Visit the main page. Click here and there. You'll probably find some more Incredibly Useful stuff. ☒
