Opportunities abound in the Indian telecom sector—be they hardware or software, technical or managerial, innovative or hands-on

Samir Makwana

As you very well know, the Indian telecom industry is at a phenomenal stage of development. It is considered one of the fastest-growing industries of all time. The number of phone users in the country crossed 22.5 crore in June 2007. According to the Press Information Bureau of India, during 2006–07, the country saw the addition of about 7.2 crore phone subscribers—a 47 per cent increase over the previous year. These figures serve to indicate the frenetic nature of progress in this field.

At the Confederation of Indian Industries Summit at Bangalore in January 2007, Dr Sam Pitroda, National Knowledge Commission

Chairman and research pioneer in telecommunications and handheld computing, pitched for the manufacture, in India, of telecom equipment such as mobile phones. If manufacturing of phones does start in India, employment opportunities on a large scale will open up.

A wide range of career opportunities can be seen on both the hardware and software front. The list is long: mobile telephony, wireless communications, Internet protocol media system, GSM (Global System for Mobile Communications), GPRS (General Packet Radio Service), CDMA (Code Division Multiple Access), UMTS (Universal Mobile Telecommunication System), VoIP (Voice over Internet Protocol), the Symbian operating system, data networks, optical networks, and more!
