Open-mindedness vs Fanboyism

by adithyagenius

Please repeat after me

- 1) I am an intelligent person striving to be perfect/genius and not a retard striving to be fanboy/hindhole
- 2) People have unique requirements, learning curve, time to spend learning and customising, money etc for their software.
- 3) The software that I use is not the best for every individual in the universe.
- 4) If I want to suggest my software/product in a RELEVANT thread I will do so backed with logical reasons and explanations along with advantages AND disadvantages (if possible). I will not imply (directly or indirectly) that they are disgusting piece of animal/human excrement if they reject my suggestions.

5) Forcing my software choice upon people with ridiculous bandwagonism and fanboying is immature. This is only going to make people hate my software and make me look ridiculous. This might also force people to avoid conversing with me.

6) Every fanboy has the mental strength to become an open-minded, practical user.

I browse digit forum for technology news and some good discussions on software (I could contribute little due to my noobism). Recently the trend has changed here with lots of threads being instigated by fanboyism which give negligible information (The most significant information I got was how pathetic the fanboys are) with same arguments / fanboy wars. These threads come disguised as useful technology news or tutorials but have little use (The only use was that I could send those links for entertaining

my friends). They also bury the real informative threads. Of course a few posts boasting about your software might introduce new software and products to noobs like me but, fanboyism has crossed a line here.

I request all sane digit forumers (I hope I am not alone) to work together to prevent this forum from going to dogs/fanboys. I have noticed that fanboyism increases when a fanboy is challenged. So, I request forum members to ignore all fanboy posts and threads or read them (if needed) without replying, however insulting it might be to your software choice. This should cool them down from a fanboy to an open-minded fan. If this succeeds I will know Gandhigiri works.

Sorry, for any bad language or spellings. I apologise if I hurt anyone's feelings.
