

Fast Track To Money?

Congratulations on your September issue—your team has yet again done great work. Hats off! I feel proud to be a *Digit* subscriber. It's great to use Thunderbird to download my Gmail and read then offline—I even save a few rupees this way—and this has happened only because of your *Fast Track*. Now for my suggestions...

Do mention system requirements for the games and software you include on your CD and DVD.

The software archive you provide should be printable.

With *Tech Careers*, please provide names and addresses of some of the institutions that provide relevant courses.

Kapil Pawaskar

Hi Kapil,
I'll address your suggestions: you're right about mentioning system requirements for games, and about the software archive being printable. It's something that needs to be arranged for, it requires a lot of work, and we might do it soon. As for the institutions we mention in *Tech Careers*—they all have a Web presence, so you can always find their addresses online.

The Digit Spec-sheet: Feature-rich!

This month—October—is the fourth anniversary of my having bought *Digit* for the first time. And though I couldn't afford to be a subscriber, I used to be at the magazine stall very often waiting for the issue. I also buy other computer-related magazines, and I've come to realise that though all the others have their ups in some way, *Digit* has always been a leader in IT magazines: it has a cute CD/DVD cover-box, an awesome *Fast Track*, marvellous software on the discs, and a wonderful magazine. My humble

advice is: do not drop any of these features!

Seiboi Haikop

Please Dunk The Ads!

I'd like to thank myself for becoming an avid *Digit* reader from June 2006. OK, well, the credit goes to you people! I'm doing a B.Tech. in IT and your (sorry, Our!) magazine has been of immense help.

I really like the articles by Ram Mohan Rao and Nimish Chandiramani in the *Digital Passion*. This time *Sci-Fa*, *Almost Intelligent*, *Alterface*, and *Touchscreens* were really, really nice.

Although I have *Digit* as a subscribed magazine in my college, I prefer to buy a separate one for myself. Besides this, the language of the magazine is such that it's so much fun to read it. It improves my reading skills as well. I suggest *Digit* as the best tech magazine if anyone were to ask me!

I can easily repair my friends' computers—by taking notes of your Q&A section, and my hardware knowledge. My friends consult me prior to making any computer purchase decisions, and I in turn refer to your magazine. Now for some suggestions:

Please include the latest, updated versions of the software you provide on your discs. This time, you provided Opera 9.2, but 9.3 was out already.

Do reduce the advertisements. They are too much!

A *Fast Track* to Web designing and programming is still awaited.

Please try to give out a *Fast Track* on Linux. There's been one, but we want something more up-to-date.

Try to include more sections on robotics and Artificial Intelligence.

Do include a regular section that covers the detailed internals of various technologies.

I know it is next to impossible for this mail to make its way to be published, but please make a note of these suggestions!

Mrinal Purohit
Jodhpur, Rajasthan

Hi Mrinal,
I'm very glad to hear that you think we're the best... we believe that ourselves, but I'm always gladdened when I see that reinforced by a reader!

Now for your suggestions. First off, it's ads that keep the price of a magazine where it is—

I'd sincerely suggest you ask someone in the advertising industry or someone working with a newspaper about this. As for the latest versions of software, well, if the magazine is to reach you on time, we must create our discs well before that date—and if something gets updated in the interim, we provide it on the next month's discs.

Robotics and AI are specialised topics, and we do cover them once in a while—our choice of articles is such that as many readers as possible are kept happy. But about the internals of technologies, yes, that's something I'll certainly consider.

Hidden Gems

I was astonished when I made some system changes you mentioned in one of your issues. From last night, I have been studying past issues of *Digit*! In the March issue, you showed us how to launch Nero faster. My Nero StartSmart opened in 7 seconds—it would take 30 before!

We'll hope for a *Fast Track* that gives an idea about running the OS and its applications faster with such "not-so-known" facts.

Gaurang Ajwalia

I Like, I Want

I have been reading your magazine for the past few months. I switched to it after trying several other magazines because it is different. I need not say which differences—everyone makes a singsong of it in this section, so I need not repeat them. Still (!), I have a few suggestions to make:

Why don't you select a theme for each issue? This way you'd be able to provide finer details of the selected topic.

In each of the articles published, writers always give their views to us. What I'd suggest is that you should print your opinion at the end. Give your readers a chance to develop their own points of view.

In game reviews, *Digit's* game PC configuration is printed. Why would we need your PC configuration? Instead, print the recommended system requirements of the game, so we can decide whether to buy the game or not.

Please don't make your DVDs bootable. Your DVDs are very popular in my friends' circle, the result being that my DVD is in a mercilessly scratched state by the end of the month. Since dual-layer DVDs are still Rs 100+ here, I can't make backups.

Give trial keys on your DVD interface.
