Rules and Regulations

Readers are requested to send in their answers by the 15th of the month of publication.

Employees of Jasubhai Digital Media and their relatives are not permitted to participate in this contest.

Readers are encouraged to send their replies by e-mail. Jasubhai Digital Media will not entertain any unsolicited communication.

Jasubhai Digital Media is not responsible for any damage to your system that may be caused while you are trying to solve the problem.

Make Explorer's Menu Bar Vanish, Then Re-appear

Solution To Last Month's Challenge

We'll mention two solutions; the first solution is the quicker one.

Open Notepad and type in the following. Windows Registry Editor Version 5.00
[-HKEY_CLASSES_ROOT\CLSID\{5b4dae26-b807-11d0-9815-00c04fd91972}]

Save the file as `menubarsdisable.reg`. Double-click on the file and press Yes when prompted. Restart your computer, and you will see that the menu bar in Windows Explorer has disappeared.

Making the menu bar reappear is not as simple as reversing the changes you made to make it disappear! Here's what you need to do: open Notepad and type in the following. Windows Registry Editor Version 5.00
[HKEY_CLASSES_ROOT\CLSID\{5b4dae26-b807-11d0-9815-00c04fd91972}]

```
@="Menu Band"
[HKEY_CLASSES_ROOT\CLSID\{5b4dae26-b807-11d0-9815-00c04fd91972}\InProcServer32]
@=hex(2):25,00,53,00,79,00,73,00,74,00,65,00,6d,00,52,00,6f,00,6f,00,74,00,25,\
00,5c,00,73,00,79,00,73,00,74,00,65,00,6d,00,33,00,32,00,5c,00,53,00,48,00,\
45,00,4c,00,4c,00,33,00,32,00,2e,00,64,00,6c,00,6c,00,00,00
"ThreadingModel"="Apartment"
```

Save the file as `menubarsenable.reg`. Double-click it and press Yes when prompted. Again, open Notepad and type in:

```
Dim myShell
Set myShell =
CreateObject("WScript.Shell")
myShell.Run("regsvr32 /i shell32")
Set myShell = Nothing
MsgBox "Menu bars have been restored.", 4096, "Finished"
```

Save the file as `menubandrestore.vbs` and double-click on it. Click OK twice when prompted. Done!

The longer solution is by using Resource Hacker. This is a different approach—you can make the menu bar disappear and reappear using a toggle mechanism by means of a left-click context menu.

Disabling The Menu Bar

We need Resource Hacker, a freeware that can be downloaded from www.soft32.com/download_3568.html. Open Resource Hacker and open `browse1c.dll`. You can find this inside the Windows directory. In Windows NT you can find it in `\winnt\system32`.

Make your changes using Resource Hacker

Click on Menu number 264 on the left, copy the first line that starts with `MENUITEM`, and paste it below the last line in that block. Change "&Menu Bar" to "BAR" (though you can write out any other string here). This

Left-click to make the menu bar disappear/reappear

makes the context menu (which appears upon clicking on the title bar) show the "BAR" command, as shown in the figure.

Save the file with a different name. Now boot your system using a bootable disk and open a DOS prompt. Replace the old `browse1c.dll` with the new one (back up the original file), and restart the computer.

Now when you left-click on the menu bar, you will get the BAR option, click it and it will make the menu bar disappear.

2. Re-enabling The Menu Bar

Click on the BAR option again to make the Menu Bar reappear, or just copy the original `browse1c.dll` back. ☑
