

Elemental Designs D1—A Dodecasub ❖❖❖

Tired of your friends showing off their new hi-fi systems, boasting of the feature sets, RMS output, and more? Just go out and get a Dodecasub and drown their ranting in earthquake-like thump! The eD D1—Dodecasub is a 12-sided subwoofer with 10-inch woofers, each capable of 600 watts RMS. Since the top and bottom of the 12-sided sub have no

speakers, that comes to $10 \times 600 = 6,000$ watts RMS of pounding power! Of course, there's technology involved, and five of the woofers fire in phase and the other

five out of phase, and all that, but who cares? Six thousand watts RMS of power will drown out a rock concert... start saving now though, because after you shell out \$2,500 (about a lakh) for this baby,

you're still going to have to get speakers that can be heard over this woofer—and an amplifier that can output, oh, about 12 to 15 thousand watts RMS to power it all. Oh, and make sure you save enough for the electricity bill too.

Stuff to lust after • Stuff for the well-moneyed

Kharma Grand Enigma ❖❖❖

We've included speaker sets in this section—actually, forget them. Meet the granddaddy of all speaker sets, the Grand Enigma System from Dutch audio specialists Kharma. Breaking tradition, we'll start with price: a whopping million dollars, and yes, we're talking USD! Do you really need to know the specifications for such a system? For the inquisitive few, the speakers were custom-designed for a huge cellar in Belgium, can output 1,00,000 watts RMS, weigh 10,000 kg, and have a frequency response of 10 Hz to 100 kHz. You can't buy these off the shelf (obviously), but if you have a crore or four lying about, get Kharma to design you one.
