

and A570 IS. The Canons took the top five spots in the overall performance figures.

The Canon IXUS 900 Ti didn't give us very good macro shots, but its outdoors colours were very good. Video quality was good at the highest resolution—1024x768 at 15fps—as well as at the standard 640x480 resolution. Skin tones were pretty neutral, too.

In this category, Samsung appears to have focused more on features than performance. The performance scores suffered mostly because of the colours, although the detail and crispness was more or less there. With the NV10, the colours were too intense, and with the i7 and i70, the images looked a bit faded.

**Canon PowerShot A570 IS**

Great performance and even greater value for money!

## Glossary

**Aperture:** The opening through which light enters the camera. The larger the aperture, the more light goes in, which results in a brighter image. The F-Stop number, or F-Number, is used to denote the size of the aperture. For example, f2.8 denotes a larger aperture than f8.

**Shutter Speed:** The duration for which the shutter is left open. It is denoted in seconds, like 1/1000th of a second, 1/30th of a second, etc. The shorter the duration, the lower the amount of light entering the camera. A longer shutter speed will give you brighter images, but if your hand shakes, you might end up with blurred images.

**ISO Rating:** ISO or ASA was traditionally used to denote the sensitivity of the film in film cameras. The higher the ISO-equivalent value, the more sensitive the sensor is to light. Higher ISO values add a lot of grainy noise to the images as compared to low values. Higher ISO settings are preferable for low-light scenarios and lower ISO settings for brighter conditions.

**EXIF:** Exchangeable Image File Format. This is a tag you'll find in file formats like JPEG. Digital cameras use this tag to store information about the camera and the photo taken such as shutter speed, aperture size, ISO sensitivity, flash, and more.

Kodak's V1003 wasn't too good in the colour department, either—the outdoors flowers showed up more pink than red.

## Value

In a category where one tends to splurge, the best camera to buy in terms of value is also one of the cheapest in the category: the Canon PowerShot A570 IS. It has all the features expected from a top-end camera, and it fares pretty close to the top-spot cameras in terms of performance as well.

## Biometric enabled Labour Management System...

Security has become a paramount concern for any organization in the modern world. Physical security of the assets and the intellectual property protection has become a major challenge of any security department of an organization. Proper vigilance over the visitors, contractors, laborers, temporary employees is the first step towards achieving effective security to the organization. There are many temporary employees entering in an organization on a day to day basis. Normally these contract employees are hired from contractors. Usually the management of these employees is done through either a manual system like "Token System" or a partially automated system with access cards. There are many issues related to these systems.

### Advantages of a Biometric enabled Labour Management System:

- Every labour gets a badge with photograph.
- Daily attendance with finger print authentication (optional).
- Maximum no of labours per contract can be restricted and controlled.
- Any person can be authenticated against a photograph & finger print.
- Repository of all labourers / temporary employees.
- In case of an accident or mishap all the details about the individual can be traced easily.
- Validity of the badge can be displayed prominently.
- Daily attendance sheets can be generated accurately.
- Allowed work timings are displayed on the badge and the same can be controlled.

That's why many corporates like Accenture, Reliance Industries, Pfizer, Adani Logistics, Magarpatta City and many more have standardized on ESM KIOSK.

Supports BS7799 / ISO27001:2005, HIPAA Compliance, ESM Enterprise version and Visitor Management System is also available.
