

Entry-Level Certifications

For the entry-level aspirant in the product-led approach, one can take up quite a few certifications. The most popular amongst these are CompTIA Security+ and the SANS GIAC Security Essentials Certification (GSEC). The Check Point Certified Security Administrator (CCSA) is another product-specific certification worthy of mention.

TruSecure ICSA Computer Security Associate	ticsa.trusecure.com/

ent IT configurations, ranging from the workstations used to the kind of routers and switches used for networks in the company. While pursuing a consulting career, a vendor-neutral certification like Certified Information Systems Security Professional (CISSP) is highly recommended since it covers a wide range of Information Security topics. Experience of around four years in network security usually gives you enough knowledge to get the CISSP certification.

The SANS Institute's Global Information Assurance Certification (GIAC) family of security certifications (www.giac.org) is also valuable. The certifications and training courses offered by SANS are geared towards hands-on technical computer security professionals who have decided to specialise in niche security areas such as intrusion detection, incident response, and so on. GIAC offers certifications in areas like security administration, operations, legal, audit, and software security.

After working as a Security Consultant for four to five years, one can super-specialise in niche segments of the industry. The International Council of Electronic Commerce Consultants (EC-Council) comprises a group of professional organisations, whose members are security companies. The purpose of the EC-Council is to support and improve the role of individuals and organisations that design, manage, or market security and e-business solutions. Their Certified

Some certifications are very vendor-specific, meaning they deal with the security of products created or endorsed by the vendors offering the courses
