Digit Reader Poll

This Month's Question

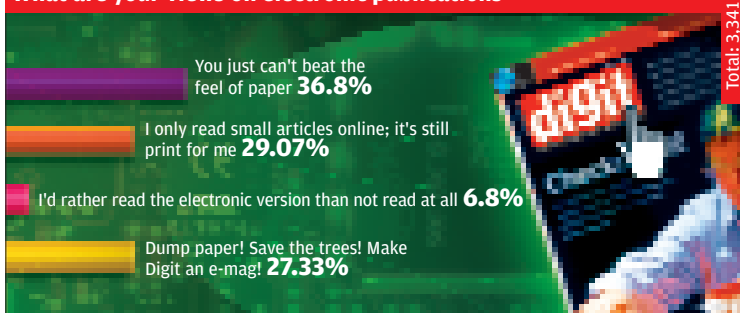

Vote at www.thinkdigit.com

Your thoughts about Fast Track:

- ☐ It's perfect, leave it the way it is!
- ☐ A little colour and better paper would go a long way
- ☐ Make it a Colour, Interactive PDF on the DVD
- ☐ Replace it with a comprehensive multimedia tutorial on the DVD
- ☐ Just end it, I hate it.

When you buy a domain at a registrar like Yahoo Small Business or Godaddy, you usually get only one email account. Some provide two or three ids depending upon the price. If you want to get more than that, you will have to buy them. Now, one email account is too less. You might want to have addresses like support@yourdomain.com, or sales@yourdomain.com or anything@yourdomain.com simultaneously. Now I will show you how to create up to 100 email accounts at your own domain, for free. All you need is a domain name and the ability to modify DNS records.

We will use Google Apps for doing this. Go to Google Apps and click on '~Get Started!~'. You will be presented with three different editions of Google Apps - Standard (free), Premier (paid) and education (free). Sign up for the Standard edition and provide your domain name to proceed. You will be asked to create an account for administrating the domain. After the account is created, you will be automatically logged into your account and into the dashboard.

On the dashboard, you can see the options 'Create new user' from where you can add new user accounts

to your domain. Before you can do that, you have to set up your email. Under the 'email' section, you will find 'Activate', click on it. Now you will be asked to configure your domain MX records.

Log into your domain registrar's account and head to DNS record management. What you have to do is this:

Create a CNAME record:

mail.yourdomain.com (you can use anything instead of mail) and enter hostname as ghs.google.com. Instructions on how to do this for various registrars are located at <http://tinyurl.com/295p9f>.

Create these MX records:

MailServer Hostname:.....Priority
ASPMX.L.GOOGLE.COM. ----- 10
ALT1.ASPMX.L.GOOGLE.COM. ---- 20
ALT2.ASPMX.L.GOOGLE.COM. ---- 30
ASPMX2.GOOGLEMAIL.COM. ---- 40
