

A Lift From

Nash David

The Whole Package

To start with Google Apps, visit www.google.com/a/. Only domain administrators can sign up for Google Apps services—this is for improved security and to prevent anonymous users from abusing domains. On the Google Apps page, enter your official e-mail address and click on Get Started. After this, Google verifies you as the administrator of the domain, and in a matter of minutes, your organisation should be registered. On the next page, fill in all your details and provide a password, with other contact information. With an initial e-mail user count of 200, practically any small or medium business

Google Apps takes care of most of your IT requirements

should be able to complete its transition to Google Apps in less than twenty minutes. You can also add more users later. Accept the terms and conditions and proceed to the next page—the dashboard. This, as the name suggests, is the panel with all the controls—it is nothing but the administrative page of your domain.

On the dashboard, are several major services—the Start Page, Calendar, Chat, Docs, Email, Web pages and Sites. Before proceeding to these services, create a list of users in your organisation. To create new users, simply click on Create New Users. For each user, fill the three data fields—name, sur-

One window for all your needs

name and username. Google Apps provides you—the administrator—with a password that can be changed later by the new users. You can also upload a compiled list of all users in the CSV (Comma Separated Value) format, and all users can be created at once. This makes things really easy for you.

Start Page

The Start Page is where you access all Google applications. You can personalise the start page in the same way you personalise your iGoogle page—bring together your content, other Google services, and interesting applications from the. The URL for the Start Page is typically **http://start.your-domain.com**. The first time you click on the start page, the typical feeds available are your e-mail—where you can see a snapshot of the new e-mails in your inbox as well a shortcut to compose a new mail. Other useful applications that you find on the Start Page are Calendar and Sticky notes, which is an online alternative to the post-it.

Calendars

The calendar is a critical tool in time management. Access your calendar at <http://calendar.your-domain.com>. Insert an event in the calendar by clicking on the respective date, at the start time of your event. In the balloon that pops up, type your agenda. If you realise that the event is going to consume more time
