Getflix, the new Netflix?

Getflix is another streaming service providing any content from any part of the world. Interesting name and icon we must say! <http://dgit.in/Nv15y>

Workshop

Third-party apps for Facebook Messenger

tions that can be used inside Facebook Messenger. Facebook cleverly extended its support for third-party app developers, who help to integrate different platforms and enable us to use their apps inside Facebook Messenger. One of the major benefits of using these third-party apps is having access to many exciting features we wouldn't otherwise come across in the app by default.

If you want to install these apps on Android, go to Messenger > Open chat > Tap an icon showing three dots in the right corner > Choose an app > Install. To install these apps on Messenger for iOS, follow the same steps.

Create a chat shortcut

All of us have those few important conversations happening at all times, whether it's over a phone call or in person. Sometimes, these conversations take place over chat. If there's a colleague or friend on Facebook Messenger with whom you need to be constantly in touch and don't want to go through the trouble of looking for them in your huge chat list, here's a simple solution: create a chat shortcut for them. To add a

shortcut for a particular chat conversation, be it a group chat or an independent chat, go to Messenger > Tap and hold the chat conversation > Tap 'Create a shortcut' and that's it! The next time you want to access the same chat conversation, you don't need to go to Facebook Messenger at all. Simply go to your phone's home screen and you'll find the shortcut to that conversation there. Unfortunately, this doesn't work with Messenger for iOS.

Send GPS locations

A few months ago, Facebook made it easier for users to send locations inside a chat conversation, and it wasn't just limited to the sender's current location. In fact, the social networking giant even enabled users to send locations irrespective of their present whereabouts. This feature comes in handy every time you want someone to reach the same location as yours or to guide someone to reach his/her destination over a chat conversation. If you're using Messenger on Android, go to a chat conversation where you want to send the location > Tap the pinpoint icon > Choose the location > Hit 'Send'.

Similarly, iOS users should 'Choose the conversation' > Tap the dotted icon in the right corner > Tap 'locations' > Choose the location > Hit 'Send'.

Change the notifications sound

We've already seen so far how useful, yet annoying Messenger notifications can be. Sometimes the annoyance could be related to the notification tone. In case you're wondering whether the app allows you to change this sound, let us give you a simple answer: Yes, it does. To change the notification sound, all you have to do is tweak a few simple settings inside the application. To replace the current notification sound, go to Settings > Notifications and Sounds > Tap 'notification sound' > Select the ringtone you want and you're done!

Similarly, you can turn on/off vibration alert, change Messenger call ringtone and configure call vibrate on ring.

Send your friend directions to any location

Download pictures to gallery

Sending and receiving pictures on the Messenger platform has become a lot easier since it was first introduced. No matter where you are or what you are doing, all you need to do to send pictures over a chat conversation is take out your smartphone, click the pictures and share them directly over the Messenger application. If you're on the receiving end of the pictures over a chat conversation, you simply need to manually select the picture you want to download and save it to your phone's gallery. However, if you'd rather auto-download the pictures received on the app as soon as you receive them, Messenger is capable enough to automatically save all your incoming pictures, irrespective of your phone's ecosystem. Simply go to Messenger > Tap 'Settings' > Select 'Data and storage' > Check the 'Save photos' option and you're done!

However, Messenger doesn't save all your outgoing pictures or the pictures you click by default. To change the default setting, go to Messenger > Tap 'Settings' > Select 'Data and storage' > Check the 'Save on capture' option.
