It's been raining wireless in-ear headphones in the test center, at least this month. We exaggerate of course, but take a look at this time's bazaar section: we've got not just one but two wireless bluetooth in-ears. The Brainwavz BLU-100 is on the budget end of the price spectrum while the other one under review – the Jaybird X2 – is more of a high-end solution.

Coming to the Brainwavz BLU-100, we were pleasantly surprised by the device's audio performance. Aside of a slight bump on the lower mids, the entire frequency range is represented quite nicely. I figure the aptX codec is doing a good job of optimising playback on the Bluetooth protocol, which is quite commendable.

The build quality of the BLU-100 isn't bad either. You have a flat cable connecting the two

₹3,399

drivers and in-line control pod for volume up/down and call answer. The buttons are good quality with great tactile feedback in order to operate without looking. The fit is snug and comfy while isolation cuts off major ambient disturbances. I'd peg pure audio performance to be in the region of the SoundMAGIC E10M or E10S. These are wired

headphones costing about seventy percent of the asking price of the BLU-100, which means the Brainwavz BLU-100 offers excellent performance for the price; with the added bonus of being wireless.

The only two downers are: four hour battery life and infrequent skipping. If later versions improve on these two aspects while maintaining the price point we'd have a near flawless product that will be quite a hit amongst consumers.

Nexus 5X

Uncluttered, unobstructed, true Android goodness

This year saw two Nexus smartphones, the smaller one being a reiteration of the much-loved LG Nexus 5 (2013). Packing in ample power in a light body, the Nexus 5X is all about sense and sensibility, although the build could have been kept smaller.

The build – all-plastic – may concern a few, but it does not feel cheap in any way. Rather, it is quite sturdy, and weighing just 136 grams, it is one of the most easy-to-use smartphones launched in recent times. The 5.2-inch, 1080p display is sharp, and while it is not as brilliant as the Sony Xperia Z5, the colours are true-to-source, and has a balance that is pleasing to the eye. The Snapdragon 808,

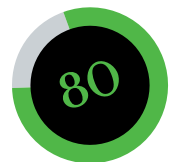

along with 2GB of RAM, proves that if done right, can perform very well without much struggle. Daily tasks are fluid, and even gaming is a good experience, if you can excuse the bad audio quality. Add to that the Android Marshmallow

experience, and this phone is a sheer delight.

The 11.9MP Sony IMX377 sensor takes good photos, and although HDR+ mode is a tad slow, the photos are absolutely delightful. The 2700mAh battery will get you home each day after average usage, with about 20% charge left.

P.S. Nexus Imprint. The best fingerprint sensor till date.
