Plantronics BackBeat Sense

Neat little punches

The Plantronics BackBeat Sense has an adjustable headband crafted of thin metal, faux leather earpads and excellent wireless connectivity – all the elements required for the epic wireless headphone experience aimed at audiophiles and casual listeners alike, at an affordable price point.

The BackBeat Sense has excellent connectivity range and battery life. It remains connected even when you are almost 60 feet away from your

source, in a space adorned by furniture. Add to that, you get nearly 16 hours of continuous listening, and about 18 days of standby time. The left earpad houses the play/pause, rewind and next buttons, while the right has connect, call receive/end, volume toggle and Bluetooth on/off switch. All of this is neatly arranged within compact ear-mounted outer shells, making it very ergonomic. At 140 grams, the BackBeat Sense is light, which aids long hours of listening, despite it being supra-aural in design.

Audio performance is superlative – the bass is pronounced, mids are distinct, and highs are optimum, slightly overpowered by the bass. Soundstage is good, but marginally lacks the wholeness due to the close proximity of the dynamic transducers to the ears. Wired audio suffers due to high impedance, and would need an amplifier to work well.

Overall, the Plantronics BackBeat Sense is one of the best, affordable wireless headphones in the market.

Moto X Style

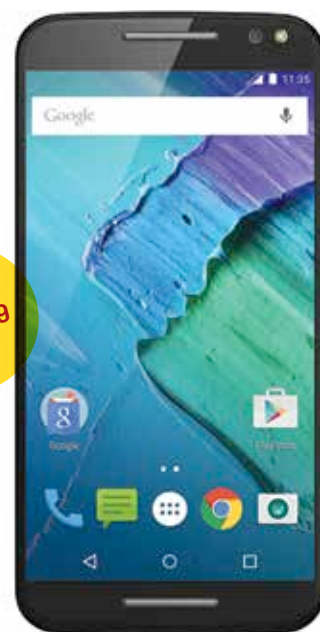

A camouflaged Nexus? Hmm...

With a 5.7 inch QHD display and Snapdragon 808

SoC, the Moto X Style is what last year's Nexus 6 should have been. It's a solidly built smartphone that many may find heavy, and despite being only 0.3 inches smaller than the Nexus 6 in screen size, it is much smaller and easier to use overall – a testimony to Motorola's design team.

Making a departure from Motorola's usual methodology, the Moto X Style has an IPS display instead of AMOLED. As a result, the Moto Display feature turns the screen into a shade of grey, since individual pixel can't be lit up on IPS displays. It of course makes the feature less effective in terms of battery

life, but not visibly so. That said, the Moto X Style is still not a very battery efficient phone. The QHD display along with Snapdragon 808 are quite intensive on the 3000 mAh battery and the phone lasts for about 8 hours on regular usage.

Further, the Moto X Style delivers performance similar to the Nexus 6P, which is more than good enough in most usage scenarios. What it lacks is the fluidity that we saw in the first and second generation of Moto X smartphones, which is kind of unexpected.

The 21MP camera is another departure from regular Motorola practices. This phone has a really nice camera. While it's definitely not as good as an Apple iPhone 6S Plus or Samsung Galaxy Note 5, it can easily go toe to toe with the Nexus 5X and 6P.
