Coolpad Note 3

Budget phone with a fingerprint sensor

The Coolpad Note 3 is not a particularly good looking phone. Its looks are rather indistinguishable from a majority of other phones. Build quality, however, is somewhat better. Along the edge runs a metal band and there is an aluminium frame inside, which makes the phone feel rigid in hand and while in use. The 5.5-inch display on the Coolpad Note 3 is good and offers vibrant, true-to-source colours.

The Coolpad Cool UI is simple to navigate, and the phone doesn't house a traditional app drawer. However, main attraction of the UI experience is the new fingerprint sensor which works like a charm. It is one of the fastest fingerprint scanners we have come across, and in our tests, it turned out to be quite accurate too.

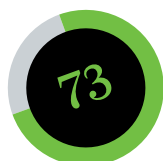

Price
₹8,999

Powered by an octa-core MediaTek chip and 3GB of RAM, the phone is quite capable in handling everyday tasks. However, it does stutter if you open a few heavy apps back-to-back, and is rather inconsistent at times. The Coolpad Note 3 offers about a day's worth of battery life. The 13MP rear camera on the Coolpad Note 3 is not one of the best shooters in this category, but it gets really close.

The Coolpad Note 3 has everything that you might need from an entry level smartphone. A decent display, reliable performance and a workable camera. On top of that, this is the first and only phone which offers fingerprint security at this price point – quite unique feature, adding to the device's desirability. However, Coolpad has left too many rough edges which need to be polished out, making us recommend the Meizu M2 Note over this device.

Oppo R7 Plus

Big, beautiful and overpriced

There is no denying that big phones, which fall into the phablet category, are better for viewing high resolution content rather than ergonomics, and the odds of them fitting in your pocket are not too high. Oppo R7 Plus fall in the similar category. The phone has a very premium build made out of aircraft grade magnesium aluminium alloy.

A large, 6-inch 1080p AMOLED panel adorns the phone. While the colour saturation is well adjusted, the display does have a bluish hue to it. On the performance front, it has a Qualcomm Snapdragon 615, but combined with 3GB of RAM and good optimisation work done by Oppo, the R7 Plus performed fluidly, throughout our usage. At the back, there is a fingerprint sensor, which is easy to use, and is quite accurate.

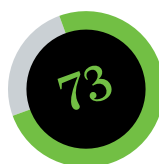

Price
₹29,990

It features a large 4100mAh battery is more than enough for the job. Using the phone as a daily driver, the phone lasted us almost a day and a half between charges, every time. While the phone does a commendable job in sustaining its battery percentage, the camera is even better. The 13MP shooter at the back is fast and accurate in almost all lighting conditions, thanks to the laser-assisted autofocus mechanism.

Conclusively, Oppo R7 Plus offers one of the best 13MP cameras, dependable battery life, and an outstanding build quality. However, all this is negated by the price, and the performance it provides at this price. If this would have been at least 8k cheaper, it would have possibly been one of the best options.
