Sennheiser PMX-686G Sport

Run to the beat

The Sennheiser PMX-686G Sport is yet another addition into the long line of fitness-oriented pair of earphones taking the Indian market by storm in recent months. The PMX-686G Sport are more focused on keeping up your tempo, rather than focusing on hardcore audio performance. The neon green and the two shades of grey (no pun intended) fuse in well to give a lively combination, breaking away from the monotony that in-ear headphone colour combinations and builds often tend to reach.

At just 37 grams, the PMX-686G Sport is a perfect build for activities in sync with your favourite playlists. The neckband is light, and curves perfectly for the SteriTouch antimicrobial earbuds to fit. The inbuilt microphone and volume controls are placed too high up the wire, but the

Price
₹6,725

intention is to ensure that the mic remains near your mouth, and that is achieved.

Audio can be very loud, although there is distortion at higher volume levels. Bass frequencies are loud and pronounced, and so are the highs, as a result of which the mid frequencies are flattened. The idea behind this is to keep up with tempo during exercises, and a thumping bass can work wonders to keep you motivated.

There is a considerable amount of audio leakage, owing to its open design. Audio timbre is very mediocre, which is a major letdown, considering its price. Overall, the Sennheiser PMX-686G Sport is an ideal pair of earphones for activity times, but that's about. Anything more and its shine starts to rub off as it won't really stand the test of purists.

Lenovo Vibe S1

Designed like Moto, with Lenovo inside

The Lenovo Vibe S1 is all about the design. It has glass on both the front and back, with a curved back and a metal rim on the side. Despite the glass body,

the phone isn't a fingerprint magnet and is very light. The overall design is not only good looking, but also really ergonomic. It's right up there with the OnePlus 2 and the Vibe S1 looks a tad better than the OnePlus X.

The 1.7GHz octa-core MediaTek MT6752 processor also performs quite well, with no stutters or lags. Gaming on this phone is better than a Snapdragon 615, but inferior to the Snapdragon 801. The tradeoff though is in battery life. The Vibe S1's battery can last 7-10 hours on regular usage.

Price
₹15,999

Further, the 13MP camera on the back is also quite good in terms of image quality. It does well in depicting true to source colours, while being somewhat lacking in details. Also, the camera is a tad slow in focusing and image processing, when compared to the OnePlus X or the Moto X Play. On the front is a dual 8MP+2MP camera, which doesn't really accomplish much. While the image quality is satisfactory, the dual-camera setting merely allows you some post processing options, nothing more. Bit of a downer, this, to be honest.

Lastly, the 5 inch 1080p display is slightly dim and not quite as good as the two competitors mentioned above. Lenovo's Vibe UI also falters with too many pre-installed apps.
