Feature

when your upgrade to the Plus version of the launcher. The app drawer customizations on the other hand include the drawer colour, icon sizes and viewable grids.

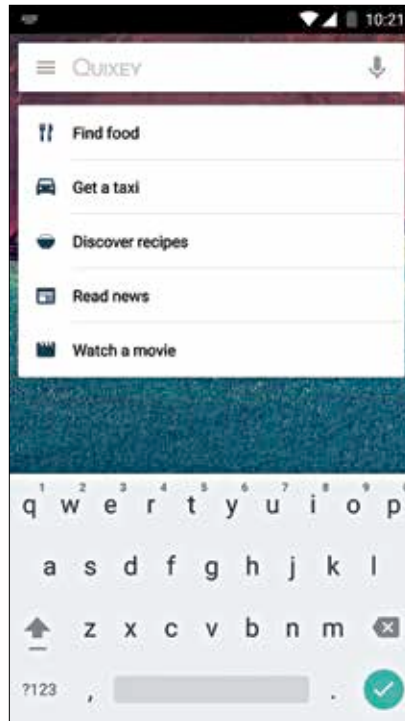

A recommendation for all the material design lovers. The launcher gives your home screen a completely new yet familiar look. It also simplifies things to a great extent. The Plus version with more unlocked features comes at a price of ₹247. That's asking a lot for the upgrade.

9 Launch by Quixey Launcher

One of the most recent players in this competitive arena of Android customization, Launch by Quixey, has a lot to offer up-front and yet manages follow the design guidelines of Google Now Launcher.

The magic of this launcher lies in basic gestures. A simple swipe up from the home screen opens the app drawer and the drawer itself feels like an intelligent mix of material design, the marshmallow app drawer and the old jelly bean launcher with customisable tabs.

The unique features offered begin with the left edge swipe menu similar to the Google Application settings menu. Swiping down on the home screen displays a search bar similar to the Google Search bar but, far more useful. It gives you basic options to 'find food', 'read news', or watch a movie to name a few. Another highlight is Deep View Cards, which open with a swipe towards the right from the main home screen. The Deep View Cards provide you information from inside installed applications for example you could setup a Google Maps card with food as the keyword and Quixey will keep showing you the

The Quixey Search bar

nearby food joints wherever you go. Now that's useful. The basic launcher settings include custom icon packs, gesture customisations, device search options and unread counts. The 'People' App that comes with the launcher also adds beauty to your recent contacts view and makes dialling and messaging simple without actually replacing your dialler or messaging app. Again a must try.

10 TSF Launcher 3D Shell

'Say goodbye to the boring traditional launcher right now', states the Google Play store listing of this launcher. If you're wondering what the developer meant when they emphasised the term 3D shell let us explain:

TSF 3D Calendar Widget

simply put it's 3D animations. Switching screens, widgets, they all come with 3D animated effects.

You can have an always moving banner on your screen or a dangling set of photos from the calendar widget. Apart from the 3D widgets, other noteworthy customisation options include: icon designer feature, icon themes, custom gestures, interactive app dock, unbelievably realistic screen transition animations, unread counts and a special side menu that auto-hides behind your home screen and contains important user-picked applications.

Another good option if you want a fresh look. Make sure you download and use all their beautiful 3D widgets which make the launcher worthwhile.
