Computer generated effects aren't just for futuristic movies and superhero films any more. They're everywhere. Switch on your TV and a CG effect is probably hidden in one of the movie scenes or advertisements you're watching. Visual effects (VFX) is not meant to be noticeable, and that takes some serious talent and hard work. During the course of your special FX career, you'll work with lots of raw footage to transform it into a work of art. All you'll need is knowledge of relevant software, an artistic bent of mind, some engineering skills and a basic understanding of physics, which will help avoid glaring mistakes like a well-built Arnold in 'Terminator 3: Rise of the Machines' lightly bouncing off the street like he weighed next to

nothing. So, if you're ready to enter this field, let's look at what you can expect.

THE INDIAN VFX INDUSTRY

When the official trailer for India's most expensive movie 'Baahubali' was released on YouTube, it garnered more than 60 lakh views and 35,000 likes thanks to the two-minute long clip featuring lush landscapes of mountains and waterfalls,

Danny Wilson, Creative Supervisor at Lighthouse Animation Studios

temples and palaces and battlefields – all made possible by 17 VFX studios with 600 artists. Surprisingly, the VFX studios hired for this job were based out of Hyderabad, home to Tollywood. Proving we're finally moving away from being just a post-production visual effects sweatshop for Hollywood movies like 'Life of Pi' and 'The Golden Compass' to actually making our own content like special FX studios, Zentrix, Lighthouse Animation Studios, Prime Focus and Studio Eeksauros are doing today.

"India is currently well positioned in the global VFX industry", says Danny Wilson, Creative Supervisor at Lighthouse Animation Studios. He continues, "This is due to the latest technology and equipment now easily accessible at affordable rates in the country, making it easy to start a company or project". Due to this and the amount of visual effects these projects call for, VFX studios are popping up everywhere.
