

Driving too slowly?

What happened when Google's self driving car was caught for driving too slow? Check it out: <http://dgit.in/GSIfDrvgCar>

YouTube Music

YouTube's new Music app is here! Check out its features in this first impressions video: <http://dgit.in/YTMusicFI>

Work@tech

same schedule all the time nor will you be doing the same work every day.

Overtime, which sometimes means spending a night or two at the office, may only be needed to be put in if a project deadline sneaks up. However, if the studio has planned the work for its employees in a way that takes into consideration their work/life balance then this shouldn't be a regular occurrence.

Similarly, the kind of work you do won't be the same every day. "In the FX department, for example, you're doing water simulation one day, and fire the next. The amount of work will also fluctuate. You might have less work on one day and triple the amount of work the next day," says Danny

FINAL WORDS OF ADVICE

This is a competitive industry and the supply of VFX artists exceeds their demand, so there are a couple of things you can do to stand out. "Stand out by

VFX effects in Mahadev were quite elaborate for being just a TV serial

showing you're willing to learn and doing what's necessary to get things done. Show that you're a team player. Someone who says 'I'm in the FX department but I want to see what goes on in the other department displays flexibility'. Individuals who want to branch out, grow and understand the industry as a whole stand out better than artists who say "This is what I do and this is the time I do it in'. That kind of attitude won't make you stand out." says Danny. "And then, there will be a job where the

artist is told what to do what they must do, but then there comes a job where you'll be asked to get more involved in the creative side and if you're not prepared to do that and the person sitting next to you is, then you'll lose out on that opportunity. Assignments require flexibility, so if you're not prepared you could be overlooked for the next guy."

Suresh advises, "With new ideas that are relevant to the time, freshers would have the potential to beat the competition. They should also be able to let go of ideas that have been rejected and ready to work on fresh concepts. This will show clarity of thought and a vision to excel."

Once you're ready to approach employees, you'll need to have a showreel ready that will best showcase your abilities to potential employers. This reel will have to be built over time since it requires a lot of effort. Also, this portfolio will keep you armed and ready to present yourself for a range of roles in creative media. 

SOME JOB ROLES IN THE VFX INDUSTRY

- | | |
|------------------------|----------------------------|
| • Accessory Designer | • Production Designer |
| • Animator | • Render Wrangler |
| • Compositor | • Rigging Artist |
| • Environment Builder | • Roto Artist |
| • Lighting Artist | • Texture Artist |
| • Matchmove Artist | • VFX Director |
| • Matte Painter | • VFX Supervisor/Team Lead |
| • Modeling Artist | |
| • Production Assistant | • Weapon Designer |

INDUSTRY-STANDARD SOFTWARE

- | | |
|-----------------------|------------------------|
| • Adobe Photoshop | • Bojou / Syntheye |
| • Adobe After Effects | • The Foundry Nuke X |
| • Autodesk Maya | • Apple Final Cut Pro |
| • Ruine / X Frog | • Apple Soundtrack Pro |
| • Vue | |

While industry standard software is being developed daily and different studios work with different packages based on what the project in hand calls for, the skills you learn in one package will be transferrable to another. For example, you could learn and actually use 3D with Blender (for free) and then be able to pick up another package like Maya pretty quickly. Also, while there's no standard set of apps used across studios, the workflows are very similar.
