Industry Connect

We are happy as long as people are clicking: Andrew Koh

At Canon's 6th Photomathon in India, Andrew Koh, Canon India's Vice-President of Consumer Imaging and Information Center, gave us an insight into Canon, the state of cameras, and Canon's vision of India.

Andrew Koh, Canon India's Vice-President of Consumer Imaging and Information Center

Canon India arranged the 6th edition of Canon Photomathon in India, and the prime photography competition saw many photography enthusiasts come together to participate in the worldwide contest. Mr. Andrew Koh, Vice President of Consumer Imaging and Information Centre for Canon India, was in New Delhi, and spoke about Canon's endeavours of spreading wider in India in terms of products, photography workshops and competitions. Here's what he had to share, on modeling photography ideas in India based on the likes of Singapore, where Canon Photomathon has seen immense participation and activity.

How long has Canon been arranging the Photomathon worldwide, and in India?

I'm thrilled to say that we've embarked upon our 6th edition of Canon Photomathon this year in India. Photomathon spans across ten Asian countries, bringing together photographic talents from Indonesia, Malaysia, Singapore, Vietnam, India, Thailand, Cambodia, Hong Kong, Taiwan and Brunei. Looking at the success of the platform, we intend to scale it up and hopefully engage enthusiasts from different parts of the world.

How many workshops a year does Canon India arrange, to promote photography?

We conduct more than 1,200 workshops in India annually across different categories in photography. We have an exclusive department called EOS Academy with a dedicated team of professional photographers and photography experts. They help customers in enhancing their photography skills in a fun and engaging environment. Apart from workshops, Canon also promotes various photo tours. Customers can register on the Canon edge website to become a member of the Canon Photo community and get information on workshops and other various photo tours.

As new DSLRs enter the market on different price points, how are Canon's existing range of DSLRs affected?

Product pricing is based on extensive market analysis and research. When a new product is launched, its price is determined by market acceptance as well as prices of comparative products. Canon is in the business of technology products. We're constantly reinventing ourselves to keep up with the fast pace of technological advancements, thus, assuring customers that they're buying the best.

How have smartphone cameras impacted Canon's range of compact cameras?

There's a lot of clicking happening from smart phone cameras but we are happy as long as people are clicking. It is a great opportunity for us to keep innovating and add new technologies in the products which we offer. Canon has been focusing on the current compact camera portfolio especially in the Zoom range category and high end premium compact cameras. A better zoom and image quality; focus on HD video recording and low light photography are some highlights.

The Canon PowerShot G3X offers a compact camera body with a large sensor and 25x zoom, but lacks interchangeable lenses at a price point of INR 60,000. What section of the audience is Canon targeting with it, seeing that users have the option of buying a DSLR which does come with compact bodies?

With large sensors, high quality optics, exceptional build quality, a plethora of manual controls in a reasonably compact form, these cameras offer the best of style and performance for discerning users. The G series is targeted for anyone who is looking to create high quality images and also for people who already own a DSLR and are looking for a second camera.
