

Pico

If you love coffee you might probably buy a coffee machine, but what if you love beer? Would you buy a beer brewing machine for your home? Many would say brewing beer is an art and PicoBrew is on an ambitious journey to make it easier. Having already released a table-top brewery earlier, Pico is their latest project to dumb down the process of brewing beer, also making the unit more smaller and cheaper. Standing on your table at only 12-inches tall, the little machine will be able to spew out 5-litre batches of beer. Of course, this unit doesn't house the keg and in no way is the Pico intended to be a portable brewing machine. Don't expect your beer to be just a tap away since brewing beer isn't just a couple of hours work and it needs about a week for fermentation. The brewing process is further made easier with PicoPaks which are pods containing precise amounts of hops and grains. These recipes give you control over the alcohol content and the bitterness of your beer. Pico is said to hit the markets in early 2016, costing about ₹68,000.

Gibson Neat Widget

If there's a podcast or talk show in the making and you've been looking for mics, then this product should catch your attention. Gibson has unveiled a new set of microphones combining a retro and futuristic design to the body. Named as Widget, there are currently three variants, all capable of acting as a fine piece of art on your desk. Not just a podcast, but if you aren't of the enthusiastic kind, you can use these mics for regular Skype calls as well. The A, B and C variants are green, red and blue in colour respectively. All of them have an adjustable height shockmount and pop filters to minimise sudden bumps in the volume. These mics connect directly to your computer using USB hence you wouldn't have to bother about pre-amps or adapters. The Widget mics will be selling at a price of around ₹6,500.

SPECIFICATIONS

Transducer: Internally shock-mounted sensor | **Polar Pattern:** Cardioid | **Frequency Response:** 20 Hz - 20,000 Hz | **Output:** USB 2.0 | **Sample Rate/Bit Depth:** Up to 96 kHz/24 bits | **Weight:** 0.81 kg
