

DESIRE

MOBILE WATCH

This month we feature a deceptive modular phone, another bezel-less display and a crazy selfie-centered smartphone...

Shift5+

Google's Ara Project is still a long way from reaching the consumer market. Several new smartphone manufacturers are trying to emulate the same modular concept in their devices where some of them have almost been successful like the Fairphone 2 (which technically isn't a modular smartphone). Now, a German company is preparing to launch their own version of a modular smartphone called the Shift5+ but looking at the pictures it is difficult to determine how they intend to replace the components where the company claims that users will be able

to swap the battery, display and other important components. We believe that the high-end components will be available so that users can upgrade their phones and as for the base specs of the device, it has a 5-inch display, an undisclosed Qualcomm processor, 2GB of RAM and 32GB of storage, 13MP camera on the rear and a 5MP camera on the front and finally a

battery of capacity 3,000mAh. Another interesting feature about the Shift5+ is users getting the option to select the OS between Android or Windows 10 while ordering the phone. The company is set to start taking pre-orders from December at a price of around ₹28,000 but the phone isn't going to start shipping before the third quarter of 2016. Even if this doesn't turn out to be a truly modular phone, considering the number of projects springing up around the concept, we might see one sooner than we think.

ZTE Nubia 11

The demand for bezel-less phones are rising, clearly stating the dislike for the ugly contours on the sides of the displays. Sharp was the first one to come out with a bezel-less phone called the Aquos Crystal and now we are looking forward to the Nubia 11.

As seen on the previous Nubia Z9, this phone also incorporates the Frame Interactive Technology (FIT) which enables specific features with the help of certain gestures and swipes on the side on the device. Coming to the specs of the phone, it has a 5.2-inch 1440x2560 display with a pixel density of 565ppi. It is powered by a Snapdragon 820 processor along with the Adreno 530 GPU, and 4GB of RAM with 128GB of internal storage. The rear camera has a 20.7MP sensor while the front camera has a 13MP sensor. The design does seem quite elegant and is expected to hit the market early in the next year.

Meitu V4

There's no stopping people from clicking selfies and understanding the hunger of users vying for more, companies have been enhancing the front camera. So much, that a smartphone manufacturer named Meitu has officially announced their next device to be sporting a 21MP camera on the front, the quality which can't be determined yet. Apart from the humongous sensor, the phone has a 5-inch AMOLED display with a resolution of 1080x1920. It runs on a MediaTek MT6795 processor along with a PowerVR G6200 GPU. The device has 3GB of RAM and 64GB of internal storage. The Meitu V4 is priced at around ₹36,000.
