

GREED

DROOL MAAL

This month we have a look at a life-size R2-D2 mini-fridge, headphones with an amp encased in Italian marble and more. Droolworthy?

R2-D2 Moving Refrigerator

This is the droid you're looking for

Ever had one of those moments where you curse about not being rich enough or not being able to buy expensive merchandise and toys? Well, here's another one to hurt you even more if you're a Star Wars fan. The R2-D2 moving refrigerator is a life-size replica of the classic robot R2-D2 from the Star Wars universe which doubles as a mini-fridge. The attention to detail is remarkable and the sounds are also similar to the droid from the movies. It can be controlled using a remote control around your house, so you could command it to bring you a chilled can

of your favourite beverage at will. If you overlook the excellent replication, and the capacity of the fridge concerns you then you must know that it can hold up to six cans of whatever you wish to stash away. Among the bevy of Star Wars branded products dropping in the market, this has to be one of the best. Now comes the most painful part, the price of this masterpiece. You and I definitely won't be the ones who could afford it since our beloved droid fridge costs a staggering ₹5.4 lakhs. But if you are in fact looking forward to bring this home, do invite us over for a drink.

Tag Heuer Connected

Step aside Apple Watch

As we prepared ourselves with the onset of premium Android Wear smartwatches, Apple Watch had already set the bar quite high by offering expensive and luxurious variants. To change the game, Tag Heuer has released the Connected, an Android Wear smartwatch priced close to a lakh in INR. Why does Tag Heuer decide on such an exorbitant you ask? For starters, the smartwatch is made up of mostly premium materials including a titanium case and a 240ppi scratch-resistant sapphire crystal display. It is IP67 certified and comes with carbide-coated titanium bezel on the 46mm diameter watchface

and anti-fingerprint coating. Not just high-quality materials, the Connected comes with a 1.6GHz Intel dual-core processor with 1GB of RAM and 4GB of storage while the 410mAh battery will offer a decent battery life. In terms of connectivity, it comes with Bluetooth and Wi-Fi. Being an Android Wear smartwatch, it's also compatible with iOS devices but don't expect it to function as smoothly on Android devices. The Tag Heuer Connected's textured rubber straps are available in seven colours. Broadly, it seems that Apple Watch now certainly has a smartwatch competitor representing the Android ecosystem through Connected.
