

TEMPTATION

CRITIQUE

In this section, we put stuff through the grinder and closely examine what comes out; everything except gadgets, because there's more to life than just that

MOVIE

Spectre

An attempt to evoke nostalgia

The 24th Bond movie, Spectre, tries to evoke a sense of nostalgia in its viewers who have watched the older movies. We wouldn't spoil the movie but it shouldn't be difficult to recognise the references made to the previous movies. Whether you find them appealing is quite subjective but a decent attempt.

Along with the short trip down memory lane, Sam Mendes comes back as the director, and teamed up with cinematographer Hoyte van Hoytema (of Interstellar fame), both presented a wonderful looking backdrop to the movie. It doesn't fall short on action, and Christopher Walken delivers a brilliant

performance. Now that's reason enough to make you watch the movie. The only shortcoming of the movie is the cliched espionage plot which takes a considerable amount of time to build it up. The plot broadly looks similar to the one we watched in Mission Impossible: Rogue Nation and it doesn't stand out as a Bond movie that you would expect.

Rating: ★★★★★

TV SHOW

Limitless

Say no to drugs, say yes to NZT-48

Many TV shows are following the path of adapting movies to the small screen but haven't been successful in doing justice. Limitless is another such series which picks up where the movie ended. It brings back the highly notorious NZT-48, a pill capable of boosting up your intelligence and brain productivity. For the TV show, you really don't need to catch up on the movie since the show keeps references to the movie at a minimum.

If you've already watched the movie, the pilot will get you edgy owing to the eerie similarity to the plot. Of course, the elements depicting his enhanced cognitive abilities are different, thankfully, which obviously seem absurd but considering the premise set by the rare drug, it doesn't sound far-fetched. This time around, our protagonist, Brian Finch, sees himself in the middle of a murder, the reason being no surprise of people trying to procure the clear pill by hook or crook. Chased by the FBI, Brian takes advantage of his acquired intelligence to narrow down the killer and he does it in no time. There's a short cameo by Bradley Cooper as well, establishing

the magnitude of his role in the NZT-48 universe.

Considering how the plot unfolds at the end, the series will eventually take the investigative thriller way similar to Sherlock. We know Mr. Holmes is already gifted with a remarkable sense of deductive abilities, leaving no requirement for a pill and he does solve the most complicated cases. Therefore, we would expect Limitless to showcase the most impossible crime cases one can hardly imagine. The series didn't feel like a drag, only because they introduced new examples about how the drug could affect your brain and bring out phenomenal outcomes. We'll be looking forward to more.

The X-Files

Fox Mulder and Dana Scully return to the a new chapter of the popular sci-fi horror show The X-Files as they continue their journey to investigate weird, unexplained case files.

Second Chance

The upcoming sci-fi crime show follows a plot where a dead police officer is brought back to life by a billionaire and bioengineer duo-genius. The show is inspired from the novel Frankenstein which is quite evident.

Jessica Jones

Marvel's Jessica Jones is a new series by Netflix which sees Jessica Jones putting an end to her superhero career and opening up her own detective agency.
