

Living with 16GB

Stuck with a 16GB or a phone with limited storage? These tips might be useful! <http://dgit.in/16GBmemory>

Migrating to Windows phone?

After launching upgrade tools for windows, Microsoft now launches new upgrade to windows phone app! <http://dgit.in/MsAppComprsn>

Mobile Antivirus Apps

FEATURES

NORTON

Norton comes with a power packed security app that includes an App advisor that will give you warning about the apps that are installed on your device. It can also integrate with Google Play store where before installation it scans and gets data from the Norton community that gives information about the security issues and risks the app may carry while installation. It provides you protection from malware by scanning your phone which can be scheduled as well as provides complete web protection. Like all the others, Anti-theft feature comes bundled with the pro version of the app. Further, it allows you to backup your contacts online and also block spam calls onto the device setting up a filter list. In stark contrast to its Android app, the app's splash screen on iOS appears ancient, and features are also curtailed. Just two basic features along with Safe ID app that has a tight security with non-recoverable password protection. There's a safe browser built in, too.

Features

App availabilityiOS and Android
Phone Tracker Yes
License Transfer Yes
Password Manager Yes
Cloud Storage.....For contacts only

KASPERSKY

With addition to the in-built anti-malware protection that is provided with every anti-virus (quite obviously!) Kaspersky gives you web protection for safe browsing. Anti-theft features like locate, lock, make your phone ring, take mug shots from the front camera and wipe. In case your phone is not connected to internet, you can send a SMS from the app installed on another phone. While testing the Anti-theft features, the phone we used had a hardware alert slider. When the phone was made to scream, it could be muted from ringing if switched to no interruptions mode with the physical slider. Similar was the case with the lock feature. Kaspersky also adds an extra layer of protection and filters calls and text messages for you that may be spam. It also has the ability to hide selected contacts, logs, messages etc. What we particularly like here was that you can schedule scans and let it work accordingly without you have to do it manually every time. No app for iOS.

Features

App availabilityAndroid
Phone Tracker Yes
License TransferNo
Password Manager Yes
Cloud Storage.....No

TREND MICRO

Trend Micro comes with a really powerful and feature loaded app that offers more than anyone else here. Along with really good anti-virus scanner for your phone, Trend Micro also promises to keep your browsing safe and block malicious content to provide complete security. It has a powerful parental control feature with a lot of versatility. The anti-theft features include options to lock, wipe, make your phone ring, locate and even make its location post on your Facebook. A very interesting feature that Trend Micro offers that made us say it wants to be a mile ahead in offering features is its system tuning options from the app itself. Trend Micro has system tuning features like an app manager, a battery optimizer with different modes like 'just a phone', 'smart saver', etc, and switches them on automatically when the battery is low. The iOS version had browser, direct access to FB and Twitter for anonymity, lost phone tracker, and data usage caps.

Features

App availabilityiOS and Android
Phone Tracker Yes
License Transfer Yes
Password Manager Yes
Cloud Storage..... Yes

HOW WE TESTED

Features score:

The features present in each antivirus are tabulated and given weighted scores depending on perceived importance. For example, real-time protection and anti-theft features will be given more weightage over parental control, and so on.

Design and Usability:

The scores for this parameter are largely subjective as they indicate our experience with the antivirus. Items such as ease of product activation, ease of web scanning, overall user interface look and feel, etc, are weighted and scored here.

Final score:

The final score that we arrive at is the sum of the performance, features, and design and usability scores with a 50%, 40% and 10% breakup respectively.

Understanding winners:

The Best Buy antivirus is awarded to the device with the best price to performance ratio based on a predetermined formula. This is the ideal, value for money product in the test. The Best Performer Award is awarded to the device with the highest overall performance score. The Editor's Pick award is awarded to the device that we feel has a lot of promise but misses out on the previous two awards narrowly. The Editor's Pick award is slightly more subjective, we confess, as compared to the other two awards.
