

LG 55 inch 4K OLED TV

Along came a giant

Price
₹3,84,900

The OLED panel allows LG to completely turn off pixels, thereby achieving true blacks and almost getting rid of motion blurs. Colours on this TV are a tad on the warmer side, but it's the kind of warmth that most people like. In addition, the TV has no visible motion blur, which is good, especially for gamers and those who watch a lot of

fast paced action, like sports etc. on their television.

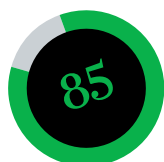

If you thought the 1100:1

contrast ratio of the Samsung SUHD TV was good, then try the LG's 81330:1 on for size. It also delivers a white point of 6900K, as close as we've ever got to the desired 6500K. The only real drawback of this TV is that the Harman Kardon speakers aren't loud enough and neither is the sound quality very good.

Added to all this is LG's WebOS, which is one of the smoothest TV UIs out there. It takes a while to get used to the magic remote that comes with the TV. It basically functions as a mouse does on a PC, but instead of a mouse-pad you just move it around in the air to move the cursor on screen. It's not quite as easy as Sony's Android TV touchpad, but it's still quite good.

Of course, the TV is a novelty for now, but it's without a doubt the best in the market at the moment. We'll be testing it more to figure out burn in and brightness reduction issues, if any.

Meizu M2

The new kid is here to stay

We at Digit have reviewed two Meizu phones thus far and both of them turned out to be rather good, much to our surprise, to be completely honest. So, when we got the Meizu M2 this time around, the hopes were certainly high. In terms of design, the Meizu M2 is built from the same materials and feature a similar framework to the Meizu M2 Note which we reviewed earlier, albeit in a smaller 5-inch body.

The M2 uses an IPS LCD panel which has good colour reproduction and is viewable in almost all lighting conditions. The phone's UI is nothing new as FlyMe OS is quite simple to use but requires a bit of getting used to. The phone comes with a Mediatek 6735 SoC which serves out a commendable performance. It is better than

Price
₹6,999

most phones in the sub-7k category. Meizu has done a good job at optimising the chipset which is able to perform well without any complain-worthy heating issues.

Like the chipset, Meizu has managed to optimise the 2,500 mAh battery as well. In our normal battery test, the phone was able to hold its charge for just around 9 hours making it a very efficient competitor. A 13MP camera on a ₹6,999 phone, well that's new, something we don't see every now and then. So, is it any good? The short answer to that is, "YES". The camera is able to capture plenty of details and maintains the colour and composition of the subject well. Going over everything, it is quite accurate to say that this is the new best phone in the sub-7K category, and definitely worth considering if you're in the market for a budget phone.
