Gaming laptops are immensely powerful, but with that power, comes great weight and generally bulky bodies. There are slimmer alternatives available, but none come close to the ASUS ROG G501, in terms of price. With a price tag of ₹95k and a 4GB GTX960M to boot, the G501VW is certainly one of the most affordable, slim and truly portable gaming laptops in the Indian market. Aesthetically, ASUS G501 features all the right stuff, red illuminated keyboard, black overall, and red accents.

There is a 15.6-inch display on the ROG G501VW features 4K resolution which looks good in daily use. That said, the laptop is under-powered to let you play games in 4K. The GTX 960M powered machine can do 1080p at best in

Price
₹95,490

gaming. The laptop can run all kinds of demanding titles albeit at medium or low graphic settings.

However, less demanding games such as Dota 2 and CS:GO ran at full chat. While the laptop does have a mousepad deactivation key, the start button does not, which seems like an oversight.

While the performance was something as expected, the battery life is what impressed us the most. Posting a massive time of five and half hours on a single charge, the ROG G501 has one of the best battery life we have

from a gaming laptop in recent times.

All in all, The ASUS ROG G501VW is a very good gaming laptop if your priorities include a slim and light device which you can take to LAN parties. At ₹95,490, you can't get a slimmer or lighter gaming laptop in India.

ASRock Fatal1ty Z170 Gaming ITX/ac

ATX features in ITX form factor

ASRock's Fatal1ty Z170 Gaming-ITX/ac is quite an impressive board. For starters, the Fatal1ty series is part of ASRock premium gaming lineup with

quite a few features piled onto an ITX form factor. The board has the usual traits of an ITC board which means there are only two RAM slots and one PCIe x16 slot. Moreover, all the ports point upwards as a lot of cases designed for ITX form factor boards expand vertically and not horizontally. We've generally seen VRM heatsinks omitted from ITX boards but ASRock has kept them on in this one.

Given the lack of real estate, ASRock has gone ahead and used the underside of the motherboard to fit an M.2 port which is something we've only seen on another ASRock board. Also,

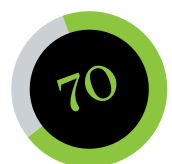

it supports 32 Gbps bandwidth and has mounting holes for 80 mm M.2 cards which is the most popular length you get for M.2 at the moment. You might have to use a spacer with certain cabinets

but it's unlikely to be an issue. The ASRock Z170 Gaming-ITX/ac comes with Wi-Fi+Bluetooth which helps with making whatever machine you build with this board, more portable than ATX builds. And with the focus on gamers, they've included a three-month XSplit license which makes the deal all the more better.

The absence of POST LED might be a downer should you ever need to troubleshoot the machine but ASRock has compensated well enough by putting more features on an ITX board than usually present.
