

GONE FOR GOOD

Shuddle– dubbed as 'Uber for Kids' and after receiving \$10

million in its early stages had to join the increasingly long list of on-demand startups to cease operations, even though they had millions in venture capital. Analysts try hard to know, how on-demand startups crash suddenly. <http://dgit.in/ShuddleSD>

THE SNAPCHAT STORY

We keep refreshing the stories tab on Snapchat to

see what our friends are up to, every minute. Snapchat founder– Evan Spiegel's story is by far the most interesting snapchat-story that you will come across, after all, it's where we all keep snapping in! <http://dgit.in/SnapStry>

THE CREATIVE BOTS

Machine learning is what the future holds and along with

the algorithms and data analysis capabilities, machines might gain the potential to surpass human creativity, putting their jobs in danger. Or are we just overthinking and the human race, with their AIs, will revolutionise the world? <http://dgit.in/CreativeAI>

THE E-WASTE TRACKER

The United States produces more E-waste than any other country with dead electronics

contributing the maximum. Already at an alarming stage, watchdogs tried to investigate the recycle procedure of the non-degradable E-waste and ended up tracking them down in developing countries, with e-waste traveling across borders. <http://dgit.in/EWstGPS>

now have the ability to apply post process filters onto your freshly shot screenshots and upload them straight away into whatever game client you may be using. While the entire list of post process filters haven't been released, we know that the following are definitely available – Film grain, Black & White, Hue Shift and Sepia.

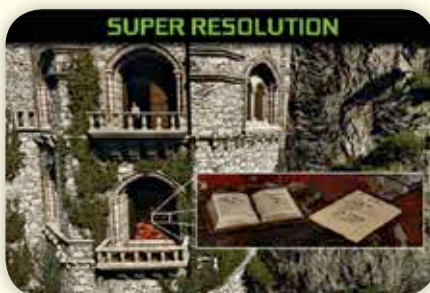

EXR Capture

If you've ever seen those super saturated images like the one below then you probably know what HDR is. For the uninitiated, HDR or High Dynamic Range is the equivalent of combining a multitude of images shot across varying exposure levels. So the level of detail in darker and brighter regions are preserved, this is not possible using normal photography.

With HDR in games, you will be able to capture game screenshots with a really wide colour spectrum that what is normally visible during your gaming run. Here's a screenshot from Witcher 3,

**Super Resolution**

When Maxwell was launched a year and a half back, NVIDIA had announced DSR or Dynamic Super Resolution where scenes were rendered at a higher resolution and scaled down to provide for much higher level of detail. With Ansel's Super Resolution, they've taken it a step further by rendering static images by a scale of 32 to capture images that are up to 8 Gigapixels in size. Imagine a DSLR with a image sensor that's as big as your face taking pictures, Super Resolution does pretty much that in the video game world. If they ever decide to use this to create a

'Where's Waldo?' (Where's Wally?) video game, then you're pretty much destined to never find Wally.

360 Camera

The name pretty much gives it away, this feature of Ansel allows you to capture 360 degree photospheres ingame. You can then export these images to your PC or your mobile phone and view them at your pleasure. NVIDIA has released a new app called the NVIDIA VR Viewer ([link](#)) for Android smartphones and if you happen to be among the lucky few who've actually received their pre-ordered VR HMDs then you can fire up Steam and install Virtual Desktop ([link](#)) to view your photospheres.

**Ansel supported video games**

In case you hadn't figured it out yet, Ansel isn't just a driver upgrade. Game developers have to incorporate the Ansel API into their games before the destined driver update enables Ansel on your NVIDIA powered

gaming machine. All you need for Ansel to work is any NVIDIA GTX graphics card upwards of the 600 series.

Ansel supported graphics cards

- **NVIDIA GTX 600:** GTX 650, GTX 650 Ti, GTX 660, GTX 660 Ti, GTX 670, GTX 680, GTX 690
- **NVIDIA GTX 700:** GTX 750, GTX 750 Ti, GTX 760, GTX 760 Ti, GTX 770, GTX 780, GTX 780Ti, GTX TITAN, GTX TITAN BLACK, GTX TITAN Z
- **NVIDIA GTX 900:** GTX 950, GTX 960, GTX 970, GTX 980, GTX 980 Ti, GTX TITAN X
- **NVIDIA GTX 1000:** GTX 1080, GTX 1070
