

DGT

All the latest lifestyle technology, gadgets to drool over and gizmo porn like never before. Desire, Greed and Temptation ahead...

**Steam games on PS4**

A combination of jailbreak, Arch Linux and some software libraries lets you play PC games on the PS4. <http://dgit.in/PS4hack>

☒ Being a CSE student I was introduced to this magazine long ago – the 'F**k you Consumers' one. It shocked me, but I understood Robert's view.

My favourites: Blippar | TED videos | Awesome FT | Encyclopedia | Videos of tested products | PDF archives | App suggestions.

My Expectations: Focus on Windows phone apps too.

I am a blogger since 2013, and I own a website where I make sufficient money thanks to you. Digit's FT ebook editions have helped me prepare for interviews, and I have three offers – Embedded Engineer, App developer and Network Engineer; I'm opting for app developer.

Happy Anniversary Digit and keep feeding our minds with awesome stuff.

–Chaitanya

☒ We do add in Windows Phone apps when they're exclusive, but because of market realities, we have to focus on iOS and Android. We're thrilled that we were in some small way able to help you get started on your road to geekdom, still going on. Keep the flame burning, don't forget to recommend us to your friends.

– Robert

☒ Hey guys! I want to get help from you regarding a JavaScript book. I also want to learn command prompt in Windows, so an article please. Also articles on hardware hacking/making? The DVD UI is outdated. Also, can you feature articles from labnol? I like his tips and tricks.

–Adityan Singla

Thanks for your feedback. We will update the DVD UI soon, and work is already underway. We don't publish articles that are published elsewhere, as we have a strict requirement of all articles being original, however, we might point you to relevant content on other sites as and when applicable, the same for books.

– Siddharth

☒ Hello to all. First I want to thank you for a wonderful magazine. I'm Ankit, I'm 12 years old and the biggest fan of Digit. I am interested in gaming and I like SKOAR! very much. I have a request. Can you

Feedback for the May 2016 issue of Digit

please give the free version of Unity Game Engine in the next DVD? Please. And again thanks for a wonderful magazine.

Ajoy Kr Das

☒ We are regular with distributing such tools in our DVDs. We had included the Unity 5 Game Engine in our April 2015 DVD. If there's a major update, we'll surely add it in our DVD. Keep an eye out.

– Abhijit

☒ I am a final year electrical engineering student, preparing for my IES exams, but I still read every single line of your magazine. I love the way you present your ideas.

1. Your YouTube channel is very dull and monotonous and lacks the flair and humour of the magazine.

2. Your editorial pages are wonderful – they are like the birthplace of ideas.

3. Manga and anime page was completely unexpected and being a fan of Naruto I liked it. I was wondering if you can drop some anime posters too.

4. I love to review movies, series as well as anime for you. Can I?

5. About the DVD, who cares about the UI, what matters is the top-notch content!

Thanks for your time and hard work.

–Himanshu Singh

☒ Our YouTube channel is actually getting better (slowly). We're writers, not video guys, but we're trying. We will try and include non-gaming posters as well. We encourage all readers to write in with original articles that aren't published elsewhere. We may not be able to publish everything, but we will certainly reply to all mails with our feedback. Thanks for understanding that the content is what's important, not the interface, but even we have to admit that a change is needed; badly!

– Jayesh

☒ To the tech demi-gods, I have been buying Digit for the past two and half years since I can't subscribe (or can I?) because I am your friendly neighbour from Nepal.

I absolutely loved the April issue. I liked the Awakening, who wrote it? Could it be Robert? I always love to read Sidharth's (love your beard, gonna grow one just like it), Jayesh's and Robert's section. I enjoyed reading SKOAR! and dmystify too, but I didn't touch the Fast Track because I don't really like the topic Big Data.

I love Linux, and am using Arch Linux. Thanks to you, I have started to learn python programming. Now for suggestions and demands. I want Linux-related content in every DVD. Can you have a separate section for Open Source
