

Make It Yours.

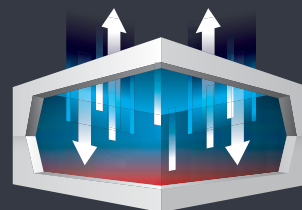

Be Bold in Your Pursuit of Cold

MASTERAIR MAKER 8

We've created the ultimate in cooling performance: our patented 3D Vapor Chamber. The result? Greater protection for your CPU and system from overheating during intensive gaming or overclocking.

You can also choose from two bundled top cover designs and 3D print your own, as well as adjust the fan size, model or position for memory or GPU clearance.

3D Vapor Chamber

Nice Vapor Chambers are merged together with native heatpipes, maximizing heat transfer compared to conventional methods.
