iPhone with better ears!

Smartphones are excellent for video, but not so much audio. Shure has a few solutions to make audio recording better on an iPhone <http://dgit.in/MV88x12>

Software and Hardware and touch on it every month? I want the 'Security Watch' section back. Where is the rest of the Digit novel that you published with just the first chapter? Can you do a workshop on how to compile a source code in Linux and Windows? Also a Fast Track on Kernel development? Lastly, your website takes really long to load for me.

—Asbin "Andrien" Dabal

4 Thanks for your detailed mail. We love receiving letters that make great demands and suggestions. If your mail had come a few days ago, we would have been able to include it in the May issue Inbox section, but we will put it in the Anniversary issue.

It's good to know that Digit helped you along in your journey towards learning programming languages. As for your suggestions – yes we need to show some FOSS and Linux love in our DVDs. Abhijit (the DVD guy) just gave me a thumbs up.

And your guess is correct – Awakening was indeed Raaabo (but shhhh...).

— Siddharth

✉ I'm a die hard fan of digit since past few years. I came to know about digit when I went to a local book store, enquiring about any technology mag. Because I live in a rural area, I can't buy it every month, but I buy it whenever I get a chance to go to the city nearby. Digit has helped me gain knowledge about the latest technology. It makes me happy just to read your mag. I have two questions:

I love coding and I've learnt HTML, PHP, CSS and Javascript. I've written class 12 exams this year. I want to start web designing as a freelancer so that I could collect some money for my future, but where do I start?

Since I was 10, I wanted to make video games. Now that I'm 19, I know it can be done, but I'm still confused about which languages I need to learn. I have an idea about an online game, but I'm losing hope as I feel it can't be done without a team. Can you help me?

— Parth Chaudhari

4 Where do you start? You start with yourself. Put the skills you've learnt to work by creating a profile website for

LETTER OF THE MONTH

✉ I'm starting with columns of Sid, Rob and Jay in the May '16 issue. This trio is absolutely wonderful! This mail goes out to Rob bro, because he made us feel nostalgic – not only me but also some of the other "similar-aged children". Here are my suggestions and feedback:

- Being nostalgic was awesome in May – because it rekindled many of my childhood memories, including the TV-based cassette utility game; (my first so called console). Maybe a poster based on the classics? Mario Bros, Street Fighter, Contra, Duckhunt, Gunman...the list is huge!
- Include themes of games such as Roadrash, Mortal Kombat 4, Quake III, Project IGI, Alladin, Lion King, Mid-town madness, NFS; it might get some of the new generation to love the old games.
- A huge round of applause for

SKOAR!'s BEAM THY GAME.

- It would be great if you provide information about suitable apps or games to try when reviewing a phone.

Oh, one more message to Rob bro, since I have seen many people commenting on your hairstyle, you should try some tattoo work (tribal one). Keep the good work up! Rock on!

— Apurv B

4 Similar-aged children!

That was a good one. I guess we're all just big babies in some way or the other! As you can see we didn't go with the retro theme as you suggested, but that's not to say that we might not in the future. We have been mulling over a retro issue (not just retro gaming, but technology as a whole). If that's an idea that appeals to anyone reading this, write in and vote and suggest what you'd like to read in such a retro issue.

— Robert

yourself highlighting your skills with these programming, scripting and markup languages. Work with pure code or modify a CMS to your liking. Write plugins for popular CMS', and you will get recognised. Don't just stop there, go after your friends and relatives. Maybe someone has a business that will benefit from an online presence. Put yourself out there.

Creating a game is actually easier. Game engines and IDEs have come a long way. Check out the March issue of SKOAR!, in which we've used one such software to make a game. Once you get the hang of a tool, you'll start understanding the nuances of developing games and soon you'll want to modify individual components. Soon enough you'll learn your way around game development. Remember to tell us when you create your first game.

— Mithun

✉ I cannot understand why you choose this ugly picture of child for your May 2016 cover page. Please don't do such things.

Biswanath Biswas

4 The cover depicts a cross between Hitler and a genetically created "perfect baby".

The idea was to suggest that genetically modifying our offspring to have only desired traits is really not much different than what Hitler had imagined. That said, beauty (or the lack of it) lies in the eye of the beholder.

There is no way that we can ever argue with the fact that you found this cover ugly. We will certainly try and take your feedback and improve from it.

— Robert

✉ I am a 12th standard student. My friend give me a dmystify to read and I found it to be very interesting. Where can I get all the editions of dymstify? I have read the one's on String Theory and The Solar System, and want to read the others too.

—Rehan

4 You're in luck Rehan, the PDFs are included in this month's DVD. Enjoy.

— Abhijit
