

Prizm

The Prizm is a music player which can be plugged into any speakers. What the Prizm does is, it searches its proximity for devices with playlists from major music-streaming services, such as SoundCloud for example, after which it compares the playlists and attempts to play the common denominator, hopefully keeping everyone in the vicinity happy with the music that's playing. The Prizm has a heart and a cross on two of its three-faced sides, which do exactly as they indicate. Press or tap the heart to have the song currently playing added to your playlist and press the 'X' if you don't want it added and want to move on to another song. The Prizm is unique in the sense that it tries to assess your taste in music and pick the best music based on your preferences and the current mood. It also eliminates the need for you to use your smartphones or other smart devices in order to listen to the music you like, since the Prizm does that for you. The Prizm will start shipping by the middle of the year, but you can get your own Prizm early by requesting an invite at their site. Price 149€ (₹11,300 approx).

Arris Surfboard SBR-AC3200P Wi-Fi Router

The Surfboard Wi-Fi router is part of a new line of products from Arris, called RipCurrent. Arris is a company that only made cable modems prior to this and are now seemingly moving on to the Wi-Fi router market. Basically what a RipCurrent router does is, it lets you extend the range of your home network without needing to lay down any extra network cables, or any extra lines. You simply plug in a RipCurrent router into one power outlet, which turns that outlet into the first end of a "power line" connection. Then a RipCurrent power line extender, or a RipCurrent Wi-Fi hotspot extender is plugged into another power outlet. The network is then instantly extended to that area of the house. With this method you can effectively connect multiple Wi-Fi clients to the network through that distant Wi-Fi hotspot extender. You can do this multiple times with several Wi-Fi extenders, which you

can plug in all around your house at any available outlets, extending the network to reach every corner of your home.

The Arris Surfboard SBR-AC1200P Extender costs \$300 (₹20,200) with \$100 (₹6700) for each extender.
