

Knocki

What the Knocki intends to do is rid you of the trouble of constantly having to switch between apps, buttons and voice control devices that you have in your home. The Knocki is a puck-shaped gadget which can go pretty much anywhere inside your home. Under the table, inside a cupboard, on the wall, it's up to you. It comes with an adhesive tape and also a more permanent mounting hardware if you feel tape isn't too reliable. All you need to do to get this baby rolling is download the companion app on your iPhone or Android phone and put in your Wi-Fi details. Once you're done with that, you can assign a total of ten custom gestures or actions to a single Knocki. Knocki supposedly supports the likes of IFTTT, Google Nest, Belkin WeMo, Philips Hue and many other smart-home brands that are currently available in the market now. The Knocki can also supposedly tell the difference between deliberate and accidental gestures. Even without smart home products, the Knocki should still be able to find your phone and control music. The Knocki is available for preorder on Kickstarter, starting at \$69 (₹4,600 approx).

Wayv Adventurer

Don't judge a book by its cover. While on the surface the Wayv Adventurer looks like a simple thermos flask, it's actually a fully-functional 200 watt microwave oven. That's right, a microwave oven. Wayv's intended purpose for the Adventurer was as a backup cooker for use in between transit, outdoor activities such as trekking and camping, and even for defense or humanitarian purposes if so needed. This 200w microwave oven houses a rechargeable lithium-ion battery which works for about 30 minutes per charge. It can efficiently heat up to 500ml of liquid or solids in roughly 4 minutes. The reason your usual microwave oven takes up all that space is because of the vacuum tubes, or magnetrons that are normally used in them. The Adventurer uses neither of those, it instead uses laterally diffused metal oxide semiconductor transistors to generate heat. These are thin enough to be built right into the Adventurer's walls. Additionally, they're relatively light as well, so the weight of the Adventurer comes to around 1.2 kilograms. Priced at the \$200 (₹13,500) mark, it's not a bad buy for outdoor enthusiasts, or even someone who may want to save some space in the kitchen, if they aren't too pressed for time.
