SPOT LIGHT

The odds and ends, the strange and fanciful, the downright absurd to the uniquely useful – you'll find it all covered in this section.

Dyson V8 Cordless Vacuum

The old Dyson DC59 Motorhead has long been considered the first cordless vacuum that could be a replacement for a full sized vacuum. However, the DC59 was not without problems; for example limited battery capacity. After two years it looks like Dyson have finally addressed those issues with their new Dyson V8. The DC59 had only 20 minutes of run time, so cleaning the house was a race against time,

literally. The V8 features an improved battery that almost doubles the capacity to up to 40 minutes, without losing any power on suction as your battery nears empty. You have an optional 'Max' mode that boosts the suction for dealing with particularly resilient dirt. Of course, boosting the suction will reduce the overall run time, but the V8 also has an indicator to show you how much juice you've got left. The V8 includes a more powerful motor than its predecessor and redesigned airflow so it's half as loud. The dirt collection bin is also larger so you don't need to constantly empty it. The Dyson V8 is expected to release later this year at a price of around \$500 (₹33,700 approx).
