

10 1 Second Everyday

The idea of keeping a personal journal is really appealing, except when you realize it's going to take discipline to update it everyday. 1 Second Everyday is a really unique concept - you use your phone's camera to take a video clip everyday, exactly 1 second long. Do this for a few months, and the app will stitch all your 1 second moments into a video that will serve as a wonderful, nostalgia-filled video diary of your life. Use it to document your life, watch your little one grow up, or even as a gift for a loved one. It's a really neat idea that requires literally one second of your day, but the results are sure to bring a smile on your face.

11 Places I've Pooped

Everyone poops. Whether you love it, loathe it, or just prefer not to talk about it, the fact remains that we spend a significant portion of our lives on the pot. What if you could mark off the places you'd pooped on a map? What cities, countries or continents would it include? You've got to admit, that would be a pretty cool graphic to look at. You can even follow your friends to see where they've pooped - the "Poop Feed" shows live updates from your friends. One handy feature of the app is it allows you to attach a photo and rating of the location, so you'll know which are the best pooping spots!

12 CrownIt

We get it - you've worked hard all week, so you've earned that drink (or five). Or maybe you detest cooking, and would rather stuff your face with a 3 course meal. But if you find yourself staring at a depleted bank balance (urban poor, anyone?), you'll want to check out CrownIt. This app rewards you with cashbacks on your spends at approved restaurants and bars in the form of 'crowns'. These crowns can be redeemed on online shopping sites like Flipkart and Amazon, or used to pay your mobile and telephone bills. Just snap a photo of your bill within 30 minutes of your meal and upload it using the app to be eligible for a cashback.

13 Triplt

As much as we all love to travel, planning a trip can be quite an exhausting process - you've got to keep track of flight bookings, hotels, taxi bookings and also take into account changes in schedule or cancellations. Managing all this info can be daunting, particularly if you're travelling in a group. TripIt simplifies the entire experience, by automatically creating a trip itinerary for you that you can share with your friends. Sign in with your Gmail account, and the app automatically forwards all travel-related information to an email address and builds your itinerary, notifying you in case of flight delays, changes in bookings, or cancellations. The app will also provide you with maps and directions when you arrive at your destination, and for a fee of \$49/year, provide real time flight tracking and seat tracking.

14 RunPee

Runpee is one of those apps that's so simple and useful that you'll wonder how you got by without it before. The app has a list of movies, each with a few "carefully selected peetimes" - short intervals of time in the movie that don't contain any major scenes that you can't afford to miss. Use these peetimes to answer nature's call, without the fear that you'll miss out on some major plot twist or hilarious scene, sparing your friends from having to explain the part that you just missed. The app has a timer that you can set at the start of the movie, and it will gently vibrate at the start of each pee-time, sparing you from checking your phone every few minutes. One killer feature of the app is that it also tells you if there are any extra scenes after the end credits that you'll want to stick around for.

15 Mixlr

Podcasts are great - you can learn about a wealth of topics while you commute, or just while doing chores at home. It's pretty easy to start your own podcast, but if you find the entire process

of finding the right equipment, software and platform daunting, Mixlr is as easy as it gets. The app's main function is to let you create audio streams, and broadcast them live - you can choose to have the app automatically list your station on TuneIn Radio, or you can embed the link to your stream within Soundcloud, Facebook or Twitter, and Mixlr will automatically create a 'Livepage' for your stream. This will let you engage with your audience in real time. Apart from regular talk shows, you can also live-stream a radio show or a DJ set

using Virtual DJ and a MIDI controller. Mixlr's desktop app also lets you live-stream a Skype call to your listeners.
