

7 Nokia 5200

This funky looking smartphone was aimed specifically at youngsters, and current OEMs, launching phones for the young 'uns could learn so much from it. It was comparatively cheaper, and being a music device, had a dedicated button for playback on the side. The 5200 was somewhat bulky, but its small form factor helped you ignore that aspect.

8 Sony Ericsson W800

Music phones, like the 5200, that Nokia launched, were meant to counter Sony Ericsson's Walkman series. The W800 was the first one, and it wowed a lot of people. It had a fully functional MP3 player, and delivered great sound quality for its time. There was also a great camera to boot!

9 Sony Ericsson K750i

When 2MP primary cameras were a big deal, the Sony Ericsson K750i had the best one.

At its time, this was the only phone that a camera enthusiast would have appreciated. It took great photos, and used some of the features from the Walkman series, to deliver good sound as well.

10 BlackBerry Curve

They're all but done with smartphones now, but BlackBerry had a big role to play at a time. The Curve took the business-focused BlackBerry phones, to the masses. It had a dedicated button for the company's, then popular, BBM Messenger, and the trademark QWERTY keyboard, that many still love, and miss. Will the golden BB era ever fully return?

12 iPhone

To many, writing the word 'iPhone' simply means Apple's entire phone portfolio. But, we're talking about the first iPhone. Why? Because it is the reason you have the phones you use today. It was a phone that an entire industry tried to replicate and 'copy'. Today, when Tim Cook is gallivanting around India, one must look back to the phone that started it all.

13 Samsung Galaxy Note

What the iPhone was to smartphones, the Galaxy Note was to phablets. The Galaxy Note reintroduced styluses for touch screen devices, and created an entire category within smartphones. While we expect the Galaxy Note 6 in a few months, this imperfect phone, is one of Samsung's biggest contributions to the smartphone market.

14 Moto G

At a time when a good smartphone usually meant spending tons of cash, the Moto G changed the game. Motorola took the market by storm with this Snapdragon 400-powered wonder. It didn't put a huge dent on your pocket, and performed like a phone well beyond its price range. When we say today, that the sub-15K market is

uber competitive, it is because the Moto G made it so.

Even now, after four generations of the device, the Moto G series hasn't really lost its appeal in the eyes of the customer. It still continues to go strong, from strength to strength.

15 Xiaomi Mi 3

While this phone sold in India for a few weeks, it is relevant for two reasons. The first, because it put Xiaomi on the map in the Indian context. Second, and more importantly, because it pushed every other OEM to up its game. The Xiaomi Mi 3 was a Nexus 5 at the price of a Moto G, and that's saying something!
