

7 Old Desktop/Laptop

Old, but functional laptops, as well as desktops can prove to be quite useful.

Along with them being your backup systems, one of the best ways to use these old devices is to use them as your dedicated download centre and a media server using FreeNAS. If you happen to do this on a laptop, you will be able to use it even in the time of power cuts!

8 VHS

One of the most unique way of reusing a VHS tape is to convert it into a USB hub that can even glow! Just a few DIY steps <http://dgit.in/VhsUSBH> and you have your own customised LED USB hub! You can also use VHS tapes and its covers to store away your internal as well as external hard drives to give it a retro look.

9 Circuit boards

When it comes to repurposing circuit boards, there is very little you can do, unless you let your creative juices flow. Circuit boards can be cut, desoldered and flattened and can be used as on a visiting card holder, cufflinks, dog tags and even to make a geeky notebook cover, lampshades and even pen holders. Still wondering how? <http://bit.ly/RcycleCB>.

10 CDs

You would have heard and seen how CDs can be arranged in various ways to look fancy (<http://dgit.in/CDCrft>) but how about a simple DIY which turns several CDs along with some other stuff into a night lamp? <http://dgit.in/CDLamp>. You can also make your own disco ball using several pieces of a CD, or choose to convert into a cool looking phone charging station. <http://dgit.in/CDDock>.

11 HDD

In case of a fully functional laptop or desktop internal hard drives, salvage them by converting them into external ones <http://dgit.in/SalvHDD>. If the hard drive is a dead, you can make yourself a clock by grabbing some tools and following these steps <http://dgit.in/HDDClck> and <http://dgit.in/HDDClck2>. The magnets used inside an HDD are neodymium magnets, which are useful too! <http://dgit.in/HDDMagn>.

12 Floppy

These may be rare to find, no doubt. But if one of these are lying around your house, they can be pretty useful. You can cut out a slit on the side and slide in a pen drive to give your pen drives a cool look <http://dgit.in/USBFlpy>. Using a floppy disk, you can also build a mini camera that takes some amazing pictures just by following a few simple steps: <http://dgit.in/FlpyCam>.

13 PSU

If you have a PSU around which may or may not be working, you can choose to make yourself a flashlight using the switch, wiring, and power port that come with the power supply. Follow these steps <http://dgit.in/PSUFlashlt> and make yourself a handy lantern for your PSU. You can also salvage one of your PSUs by converting into a benchtop power supply unit in case if it works just fine. Result? You will have a PSU that can output 3.3V, 5V, 12V and -12V, just as you would want. Full steps here: <http://dgit.in/BnchPSU>.

14 Cassette tapes

Found some cassette tapes around? You can try your hand at creating some cassette tape art just like Bruno Mars <http://dgit.in/CassetteArt>. The outer covers of a cassette are one of the best and cheapest phone holders available out there. If you could get your hands on to a few transparent cassette tapes you could also make yourself an LED Cassette tape lamp that looks uber cool. <http://dgit.in/CstLmp>.

15 Gadget sculpture

In case you have a little of everything and none of it is functional, you can try your hand at gadget sculpturing. Using various bits and parts to make something unique is definitely a great option <http://dgit.in/NeonTbl>. Before you already start planning your sculptures, check out these links for some inspiration: <http://dgit.in/GadScul1> and <http://dgit.in/GadScul2>.
