

1 Weili Dai

Dai is the co-founder of Marvell Technology Group. Marvell's a giant of the networking semiconductor chips, with ethernet and Wi-Fi controllers found everywhere. The first iPhone's Wi-Fi chip, for instance, was made by Marvell. Dai's been instrumental in not only co-founding a successful company but mentoring upcoming startups, too.

2 Susan Wojcicki

Did you know that Larry Page and Sergey Brin first set up shop inside Susan Wojcicki's garage? She has played a critical role in the launch of Google Images, Books, Video, the Youtube purchase, the deployment of Analytics, AdSense and AdWords, and currently serves as the CEO of Youtube. Need we say any more?

3 Lucy Peng

When you hear about AliBaba, you only hear about Jack Ma. You don't hear of Lucy Peng, a co-founder of the company. Peng was head of human resources and marketing, and also served as CEO of Alipay (Chinese version of PayPal), which has been instrumental in driving AliBaba's success.

4 Safra Catz

Since Larry Ellison stepped down as CEO of Oracle, the limelight has been on Catz, the company's co-CEO. She isn't exactly a techie, but Catz is a street smart executive that has helped propel Oracle to its current peak in the IT software universe. Thanks to her, Oracle is now running on more devices globally than all the other popular operating systems combined!

5 Meg Whitman

In an industry dominated by male doyens, Whitman stands alone and proud – a true titan among lesser gods. Apart from currently serving as the CEO of HP, Meg Whitman sports one heck-of-a CV. She has degrees from Harvard and Princeton, has a wealth of experience while working in strategic executive roles at large companies like Walt Disney, toy manufacturer Hasbro, and several others.

As if all this wasn't enough, Whitman's career's defining moment came during her decade spent at eBay, where between 1998 and 2008, she took eBay from a small service provider into a multi-billion dollar global ecommerce platform with tens of thousands of employees. Nothing she does is short of world-changing in the tech industry.

6 Ginni Rometty

If there's one person that's synonymous with their company, similar to Steve Jobs at Apple, it has to be Ginni Rometty, the current CEO of IBM. Ever since graduating with a bachelor's degree in computer science and electrical engineering, Rometty joined IBM in 1981 and rose through the ranks, never looking back. She played an instrumental role in the purchase of PwC and became senior vice president of IBM's sales, marketing and overall company strategy. She's the one who's steered IBM towards cloud computing before the term was even invented and is currently thinking of ways to commercialize IBM's Watson.
