

7 Ursula Burns

Probably the best kept secret at Xerox, Ursula has been a guiding force behind Xerox's fortunes ever since she joined the company back in 1981. She's taken up several strategic executive roles at the company, finally becoming Xerox's CEO in 2009 – the first African American CEO of a Fortune 500 company. Serving on the board of several big corporations and prestigious universities, Ursula Burns continues to break stereotypes and do a splendid job of dominating the global technology scene.

8 Padmasree Warrior

Warrior's a rockstar of technology landscape, having assumed high-ranking executive positions at Motorola (CTO) and Cisco (CTSO). She's currently serving as the US CEO of NextEV, a company that's into electrical vehicles, but whose motto proudly proclaims that they're more than just a car company. With the current global push towards electric cars, Warrior and her company are leading from the front.

9 Parisa Tabriz

A self-proclaimed "Security Princess" at Google, Tabriz leads a team of internal hackers that searches for holes in Google's Chrome browser, which is used by over a billion users all over the world. Tabriz also mentors kids and wannabe white-hackers at hacking conventions.

10 Mitchell Baker

Long before Google Chrome came along, Firefox challenged IE's monopoly in the late '90s. As the executive chairwoman of the Mozilla Foundation, Baker is responsible for rallying a worldwide employee base with a huge base of volunteers contributing towards Mozilla's

Firefox, Firefox OS, and other new software and services initiative. Under her leadership, the Mozilla team's going from strength to strength.

11 Sheryl Sandberg

The current COO of Facebook, Sandberg's tasked with keeping Facebook's network fresh and exciting for 1.7 billion active monthly users! No pressure. Before joining Facebook and becoming the first woman on its board, Sandberg used to work at Google. She has also served as the chief of staff to the US Treasury Secretary in the past. She is an inspiration to women across the globe.

12 Ruth Porat

Widely regarded as one of the most powerful women in tech, Ruth Porat served as a high-level advisor to the US Treasury (like India's Finance Ministry) and held an executive post at the US Fed (like India's Reserve Bank), before she decided to change careers. She went from high-profile Wall Street heavyweight to CFO of both Google and Alphabet. No pressure, eh?

13 Angela Ahrendts

Ahrendts came into the tech universe from a career spent in the fashion industry, where she served as the CEO of Burberry. Under the stewardship of Tim Cook, however, Ahrendts moved into Apple as the senior vice president of Retail and Online Stores. In 2014, she earned the highest salary in Apple (more than Tim Cook's even) – US \$70 million (₹47 crores). With Apple's increased India focus and intended retail push, Ahrendts' role becomes even more crucial to Apple's fortunes in the near future.

14 Marissa Mayer

Once upon a time one of Google's top executives, Mayer was employee number 20 and Google's first female engineer in 1999. She held various senior executive roles at Google, green lighting several key initiatives, before becoming the CEO of Yahoo! in 2012 – when Mayer was arguably at her peak. While at Yahoo!, she successfully completed Tumblr's acquisition, one of the fastest growing social networking sites at the time, and is looking for new ways to enhance Yahoo!'s products and company profitability.

15 Amy Hood

As the CFO of Microsoft, Hood's been on a rampant acquisition spree in the recent past. A successful investment banker before she joined the Redmond giant, Hood has ensured the software giant's profitability while also trying to buy out interesting prospects – Yammer, Skype and Minecraft, among others. Hood plays a key role in one of the largest and most influential tech companies on the planet.
