

5 Virtual Bubblewrap

(<http://www.virtual-bubblewrap.com/popnow.shtml>)

The best things in life are free - and the simple, guilt-free joy of popping bubblewrap lives up to the adage. Of course, the joy is hindered by its availability - you're limited to those times when you buy a product or an appliance that comes wrapped in layers of bubblewrap, waiting to be popped. This website eliminates that problem and lets you indulge in that pleasure virtually, replete with that soft 'pop' sound that's produced every time you pop one. All out of bubbles to pop? No problem, you can 'order' a fresh sheet with the click of a button.

6 Now I Know

(<http://nowiknow.com/archives/>)

They say you never stop learning, and Now I Know takes the advice to heart, sending you a daily email digest, containing an article that presents an

interesting fact with a little story or explanation behind it. The real treasure here, though, are the archives dating back to more than 6 years. That's a compendium of nearly 1500 articles, covering a diverse selection of stories, including ones about a man who's been arrested 1000 times, how Google uses goats to mow its lawns and why the Tower of Pisa leans. If you spend enough time on this website, you will be a genius in general knowledge!

7 2048 Tetris

(<http://www.prat0318.com/2048-tetris/>)

We all remember 2048, the addictive tile game that took the world by storm a few years ago. Well, as it usually happens, the viral nature of the 2048 game inspired a number of clones, includes ones that used the Fibonacci series instead of simple math, sub-atomic particles instead of numbers and even one that combined the game with another classic, Flappy Bird. Among the more interesting of the clones

is one called 2048

Tetris, that infuses some features from the age-old classic Tetris into the now-familiar 2048.

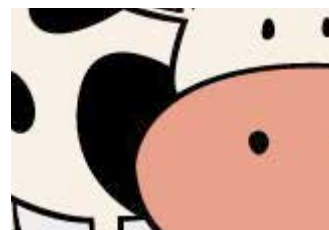

It's a delightful mating of two well-loved games in a way that almost feels natural. Give it a try, if you have time to while away!

8 Find The Invisible Cow

(<http://www.findtheinvisiblecow.com/>)

This is one of those internet games that's fun to play for the sheer idiocy of it. The objective of the game is to find a hidden cow on your computer screen. When you start the game, you're presented with a blank page, and the word "Cow" being repeatedly muttered in the background. With a concept similar to 'hot or cold', the volume of the voice chanting 'Cow' increases as you move your mouse pointer closer the cow, and decreases as you move away from it. Using the level of the voice as a cue, locate the cow by clicking on its approximate location. As you advance through the levels, you unlock different animals to play with.

9 Top Documentary Films

(<http://topdocumentaryfilms.com>)

"It's not a movie, it's a documentary" is a great way to convince people that you're actually learning something instead of whiling away your life in front of the television, and Top Documentary Films lets you adapt the same excuse to your YouTube binge-sessions as

well. The site is home to thousands of free documentary movies, spanning genres from history, politics and economics to conspiracy theories and biographies.

It can be a great substitute for movie night, and you end up learning something in the process.

10 You Are Not So Smart

(<https://youarenotsmart.com>)

You consider yourself a rational person - so much so that a lot of careful thought and planning goes into something as mundane as choosing a restaurant to eat at. Our minds though, are far less credible than we give them credit for, and the biggest culprits are our cognitive biases. These are systematic errors in judgement

YOU ARE NOT SO SMART

A Celebration of Self-Deception

that creep in surreptitiously, compromising our ability for rational thought. These biases affect our everyday decisions, whether it's choosing which item to order off the menu, how we approach a problem of. Luckily, the systematic nature of the bias (meaning that they occur every time, to the same extent) allows us to be aware of it and work towards mitigating its negative effects. You Are Not Smart is a collection of these biases that spells out how to identify and control them, resulting in smarter decisions, a clearer thought process and increased likeability among your peers!
