We compare 15+ smartphones from all the top manufacturers compared to tell you which one can take the best photos

Prasid Banerjee
prasid@digit.in

These comparisons should start the way those Honest Trailers on YouTube do. Over the past few months, our Facebook and Twitter feeds have literally been filled with questions about the best camera phone to buy. There are a ton of them, but determining 'the best', calls for a full blooded Digit comparison, and what better time than the 15th Anniversary, right? So, to take a page out of the YouTubers' playbook, "Ok, ok! We'll do best camera phones!"

Smartphone cameras have come a long way, but choosing one amongst the sea of devices remains a herculean task, of sorts. Unlike processors and RAM, the camera specs give you precious little information, unless you're an expert of the field. Even so, a camera, especially the one on your hand-held device, is best described by the final photo it clicks.

In smartphones, cameras are quite dependent on the algorithm each company uses. That is not to say that hardware doesn't matter; just that products are usually differentiated for the algorithm they come with. You would know a lot of people who buy a particular brand simply because of "how

good their camera app" is. You may even be one of those people yourself.

To determine the best camera, one needs to of course test it, but when looking for the best camera phone, there's more to test. It must have a good camera, but it also needs to be a good enough phone, right? After all, what's a good camera without sufficient storage, or enough power? Let's begin...

LeEco Le 1s Eco

Its 13MP rear camera is perhaps the weakest part of this phone. That said, the Le 1s camera will get you by in outdoor sunlight. It can take satisfactory shots in daylight, but quality starts deteriorating as the light
