

Typing on thin air?

Tap Strap, a wearable keyboard, lets you type on any surface using gestures. <http://dgit.in/tapstrap>

18 years in space

After almost 18 years, the International Space Station completed its 100,000th orbit of circling Earth. NASA's video breaks down what these trips around the planet mean. <http://dgit.in/18YSpSt>

Phone cams

HTC Desire 828

The HTC Desire 828 turned out to be a disappointment, especially in terms of its camera. While the phone can do satisfactorily under sunlight, the white balance is not good on most other settings. Under low light, the camera loses both white balance and details, compared to the much cheaper Moto G4 Plus and Xiaomi Redmi Note 3.

The octa-core MediaTek MT6753 chipset is no match for the Snapdragon 617 and 650 on the Moto G4 Plus and Xiaomi Redmi Note 3 respectively. On top of that, the Desire 828 costs considerably more than the two other devices. Overall, it's not a very good buy.

HTC Desire 728G

HTC Desire 728G

The Desire 728G, however, is worse than the 828. It takes too long to focus, and its camera's image quality is even lower than the 828. Under low light, images are too dark, and there's a lot of noise. While images are better under bright lights, they lack sharpness, making this perhaps the worst choice where camera is concerned.

The same can be said about the performance. The phone has the same processor as the Desire 828, but lesser RAM.

OnePlus X

The camera is the OnePlus X's strongest suit. The phone is pretty fast to focus, and can take very good photos, in most light con-

OnePlus X

ditions. While images taken by the phone aren't as good as Moto X Play's, the difference is very little. Under bright sunlight, the OnePlus X is fast, takes sharp photos, doesn't overexpose and delivers well balanced colours. In lower light, though, the phone can't reproduce the same details that the Moto X Play does.

Also, 16GB internal storage on the OnePlus X is too limiting. While you can expand the storage, 16GB is still too little. Further, the phone runs on a Snapdragon 810 SoC, which is somewhat outdated. While its performance is smooth enough, a newer processor would have been preferred.

Moto X Play

The Moto X Play has the best camera in the sub-20k smartphone segment. It may not be the best phone, overall, but

Oppo F1 Plus

Oppo F1 Plus

The Oppo F1 Plus is actually more about its 16MP front camera, than the one on the back. Nevertheless, in this comparison, it holds its own. The 13MP rear camera isn't the best in terms of sharpness, but you'll be taken by the punchy colours that it delivers, as long as the light is good.

Under low light, the F1 Plus is acceptable, but not the best. It costs ₹26,990, which means much better is expected of it. Colours, under low light, are dull, while a lot of noise creeps in as well. The Oppo F1 Plus is also not the best in dealing with shadows. It runs on the Helio P10 SoC, from Medi-
