low light, and colours are slightly dull, while the details are also lost. Shooting under good light, the Vibe Shot can deliver good photos, that are sharp, with good colours.

Another downside to the Vibe Shot is that it doesn't really perform well in other departments. The phone's Vibe UI isn't well

optimised and Snapdragon 615 doesn't do as well as it does on the Moto X Play.

Xiaomi Mi 5

In terms of performance, the Xiaomi Mi 5 is one of the most powerful smartphones that you can buy today. Its camera isn't in

the same league, though. The 16MP Sony IMX298 sensor doesn't do very well under low light on this phone. While the Mi 5 can take some very sharp and well balanced photos in brightly lit outdoor conditions, the image quality deteriorates under lower light levels. Even in indoor conditions, under
