Pebble Time Round

A really light smartwatch that looks cute and pretty

The Pebble Time weighs 28 grams making it extremely light to wear. There are times when you don't even realize the device is on your wrist. The fact that its so light is one of the best features of the watch. The Pebble Time Round doesn't have a touch-screen but has four physical buttons – three on the right and one of the left. The left button is the back button and on the right you have the up, down and action button. As the name suggests, it has a round display.

The Pebble Time Round, it is very well built. It has a small footprint and feels light on the wrist. It isn't as gorgeous as the LG Watch Urbane or the Moto 360 second gen. In fact, for some it may look like a toy. But the build and design is functional and that's why I

like it. What's more, the Pebble Time Round looks pretty good, striking an attractive pose on your wrist. Its wristband may not look very manly,

At best, using the Pebble Time Round conservatively, I got about two and a half day's battery life. This was with keeping the backlight on, brightness low, and timeout at 3 seconds. Changing these settings resulted in a reduced battery life and the device lasted for about one day (a little over 30 hours).

The apps library is large and there are some games that you can play on the watch which is addictive. The smartwatch is compatible with Android and iOS. It doesn't have voice functionality like Google Now or Siri but you can reply to messages using voice commands. If you don't want to flaunt the smartwatches made by phone makers, then go for this one.

Chromecast 2

A good streaming dongle got a whole lot better

The Chromecast 2 has a circular design with the HDMI cord sticking out at one end making it a lot more convenient to place behind the TV. The Chromecast 2 is available in 3 colours – red, black and yellow (Google calls the yellow one lemon). The Chromecast 2 still needs external power to function. Overall the new design of the Chromecast is pretty attractive.

A very cool thing about the Google Cast app is that it shows you all the apps that are compatible with the Chromecast. Surprisingly, the HotStar app doesn't support the Chromecast and that's a bummer. The Chromecast 2 boots up real fast, has better Wi-Fi range and connectivity than its predecessor and the apps load faster. But it still isn't perfect. Mirroring an Android smartphone to to

showcase online content can be difficult. In particular, I tried to mirror my smart-phones display and watch Game of Thrones via HotStar and apart from lagging, the mirroring kept crashing. Mirroring the smart-phone to show local content worked smoothly.

Coming to gaming, the game I tried to play was Injustice: Gods Among us. There was a noticeable lag during the screen mirroring of the game. The lag was under one second but it was well noticeable. There are some games recommended on the Google Cast app that will work smoothly, but rest assured that all apps & games aren't supported.

Overall, if you are someone that consumes a lot of content on your smartphone via entertainment apps and would like to seamlessly share photos you have clicked from your smartphone to the big screen, then the Chromecast 2 works like a charm. High end games and some mirroring issues aside, the device has good overall performance.
