

Price watch

Were you pondering over purchasing a smart watch? Or perhaps a brand new gaming laptop, here are our picks.

System Shock on PS4

Nightdive Studios' "System Shock" is being launched on PS4 following fan demands digit.in/SystemShockPS4

Agent 001

Laptop under ₹60k

I've been an avid reader of Digit for 6 years now, though I stopped reading it while I was in XI-XII. Now I'm moving out for further studies and want some good recommendations for buying a laptop within ₹60k. Apart from normal use, I intend to use it for some light gaming. I don't have any particular brand preferences although I've got certain models in my mind, coincidentally all from HP: Pavilion 15-au003tx, Pavilion 15-au084tx and Pavilion 15-ak007tx. The last one as far as I found out has to be imported from Thailand and is not available locally in India but I would prefer buying from a physical store, so that can be ruled out in a way. I've no idea about competing models in this range from Dell, Lenovo, Asus and other brands. My situation demands for a well-rounded balanced device, so suggest accordingly. Thanking you in advance!

– Abhineet Pratyush

A Unfortunately, it'd be really tough-nay, impossible for me to tell you which HP (or any other brand's) laptop SKUs are available in offline stores. The various samples of laptops that are housed for display and stocked for sales in brick and mortar stores varies from one store to another, one city to another, etc. So the best way to find a lot of options is to shop online. Go to offline stores after deciding on a laptop's specs that you like and want to purchase online. So, for instance, if you like an HP Envy 15 laptop online and you're 99% sold on it, go to an HP retail outlet just to calm your nerves and experience exactly the same laptop (or a different from the Envy 15 family) to see if you like the laptop's keyboard, ergonomics, weight, looks, etc. Because that's the stuff that you can't do online when you're contemplating to hit the purchase button.

The Dell Inspiron 15-5559

I went to HPShopping.in to search for a laptop in your budget, and found this one that looks good for the money- HP Pavilion 15-ab522tx. It has pretty much the right combination of hardware features packed into an affordable package. On Flipkart, this Dell Inspiron 15-5559 listing is looking good, too. Both laptops offer good build quality, features and performance output. If you can afford it, the Dell one's just a shade better than the HP.

Moto G4

Moto G4: To buy or not?

Hi Agent 001, I'm a Motorola fan. I've used the original Moto G for over 3 years now with little complaint, and I've recommended Moto Es to my friends and family. While my Moto G has been a trusty companion for all this while, I feel it's time for me to upgrade. I've been waiting for the launch of the Moto G4 Plus, to upgrade my Moto G, but I've been reading less than stellar reviews of the product. Should I buy it or not?

– Mr. Khurana

A The Moto G4 is a very decent smartphone, offering good battery life and a decent camera. It's also one of those rare handsets that comes with stock Android built in. That said, there are noticeable stutters in its performance, and it simply does not feel as if it is offering you something premium for your money. At ₹12.5k, the Moto G4 is a decent smartphone, but simply not among the best.

Unfortunately, it does not offer the all-round performance balance that the likes of LeEco Le 2, Xiaomi Redmi Note 3 and Lenovo ZUK Z1 do. Once again, there's no one feature that's a deal breaker on the G4, it's still a good smartphone, only not the best when compared among a bunch of other candidates out there that offer better value for money.

Which camera to buy at ₹30k?

I have ₹30,000 to spend to buy a decent camera to dive into serious photography. I've never used anything other than a simple point-n-shooter up until now, and want to explore my interest in photography. Between a DSLR and mirrorless camera, which camera should I buy, and why? Also suggest good lenses.

– Shater Bagh

A The Nikon D3300 will be the ideal camera to start your photography journey. It is affordable, easy to use and learn photography with, and produces good photograph quality and autofocus. There will be plenty of options to choose lenses from, and ample service centres to take care of your camera. I'd suggest you to not opt for a mirrorless camera right now, because even though they will be faster, easier to hold and operate since you haven't used any apart from a digital

Nikon D3300

camera, the choice of lenses are not too vast, and most good mirrorless ones are more expensive than your budget. For extra lenses, you can get a Nikon AF-S 35mm f/1.9 for about ₹9,000, and the D3300 with a standard 18-55mm lens is for about ₹24,000, which brings the total price to ₹33,000. Hope this helps.
