

course featured similar gameplay to that of Lego Star Wars or Lego Indiana Jones. However, this was the first title to feature a completely original storyline or plot. This is a risky move, especially when it comes to a franchise like DC, but they pulled it off. Many DC fans played the game simply to enjoy the original plot that came with the game. This was just the first of three more Lego Batman games to come which would become in our opinion one of Lego's best trilogies to date. Another unique thing to note was that the game had you play as the villains as well, giving players another perspective to look at things.

2009

Lego Indiana Jones 2: The Adventure Continues, like Star Wars: The Complete Sage, featured the first three movies and added the fourth, Kingdom of the Crystal Skull into its repertoire. It's a sequel to the first Lego Indiana Jones: The Original Adventures but it contained newly designed levels for the first three movies as well. However, people were getting a bit bored with the Lego format by this point and the game received a very mixed response. However, the biggest issue seemed to be that most of the game was based on the worst movie in the series, i.e., the Kingdom of the Crystal Skull. And we're inclined to agree, that was the worst Indiana Jones movie to date.

2010

In 2010 we finally see a Lego Harry Potter game which followed the current Lego gameplay format. Lego Harry Potter: Years 1-4, as the name implies, is based on the first four titles of the franchise, the Sorcerer's Stone, the Chamber of Secrets, the Prisoner of Azkaban, and the Goblet of Fire. The core gameplay, as mentioned, is similar to previous Lego titles, but with various additions, such as spell casting(duh). There were many spells to choose from which would unlock as the player progressed through the game. There are several new additions to the game mechanics and level design showing that developer TT games were attempting to make improvements to the format.

2011

2011 saw the release of Lego Star Wars III: The Clone Wars, which was based on the animated series of the same name. Again, at its core it was similar to previous titles but did incorporate some new gameplay elements into it. It also featured characters from the original saga who were playable.

The same year also saw the release of Lego Harry Potter: Years 5-7, the follow up to Lego Harry Potter: Years 1-4. It was based on the final four movies in the series, the Order of the Phoenix, the Half Blood Prince, and the Deathly Hallows pt 1 and 2. It featured new areas to explore and of course new characters to play as.

Lego Pirates of the Caribbean: The Video Game also released the same year, and was based on all four Pirates of the Caribbean movies. 2011 also happens to be the year Pirates of the Caribbean: On Stranger Tides released and the game was released alongside it. Lego Pirates of the Caribbean is also the first Lego game to be based on a Disney franchise, however, it didn't feature anything significantly

new and didn't do as well as the other two Lego titles which released that year.

2012

Two Lego games released in 2012. The first was Lego Batman 2: DC Super Heroes, a standalone sequel to the first Lego Batman. The game featured a TON of DC characters several of which were playable within the game. It also has the merit of being the first Lego game which has an open world. While still similar to its predecessors in gameplay, it featured several playable characters with different abilities and special weapons and gadgets. Lego Batman 2 is also the first Lego game to feature full on voice acting as opposed to the grunts and mumbles that were being used so far. The game was well received and was praised for its gameplay, plot, and voice acting.

The second Lego game to release in 2012 was Lego The Lord of the Rings. Based on the film trilogy, the followed the events of The Fellowship of the Ring, The Two Towers, and The Return of the King. The game featured voice acting and music taken from the three movies.
