LETTER OF THE MONTH

✉ Hi Digit,

I am Darshan. I am a subscriber of Digit for the past 12 years. Recently I bought a gaming rig and I wanted to share the experience which I think would be incomplete without a short background.

So here it goes: I belong to Nabha, a small town in Punjab. My father had gifted me a PC on my 18th birthday, 14 years ago, in my first year of B.Tech. It was a humble Pentium 4 (1.7 GHz) machine with a CRT monitor.

While I was in B.Tech., I developed a liking for computer games which slowly became a passion. Only Midtown Madness and Quake 3 type of games would run on it and I became desperate to buy a gaming rig but I did not want to force my parents to buy me one. So I decided to buy one when I got into a job. So I got into a government job in 2011 and in 2012, I purchased a laptop a core i7 HP Pavilion dv6 6121tx laptop.

Although this laptop can handle games at medium settings, I wanted more – a beast of a machine. Therefore, I started collecting money. So now was the time. I turned to the Digit forum and some guys were happy to help. Finally, I and my family (mom, dad and wife) went to Delhi and purchased the components as below:

Asus H97 Plus, Intel Core i7 4790, Cooler Master 690 III, Gigabyte GTX 970 G1 Gaming 4GB, BenQ EW2440L 24", Seasonic 520W Corsair Vengeance DDR3 1600 MHz 16GB, Corsair H80i, Samsung Evo 250GB, WD 1TB Black, Logitech G5020, Steelseries 5HV3

It all set me back by Rs.1,41,543.

Although I had never assembled any PC before I assembled it perfectly well and it is all thanks to Digit. It was Digit which imparted me with the knowledge and confidence. So I owe to you, Digit.

Thanks.

Now this machine is a beast.

I can play all the games on it with full settings at 1080p. I bought this specific monitor for its seemingly bezel-less panel after looking at ads in Digit but now see that the display starts after a good 5mm from the edges which didn't reflect in the ads. Well, otherwise, it is a good

monitor. I also had to settle for the above mentioned headphones since Steelseries Siberia was not available although I regretted this later.

Someone from the forum suggested not to run the power cable to the CPU along the motherboard. Is it right? The

cable is too short to route through the back. What should I do?

I am currently using the speakers of my old desktop and I'm planning on buying one now. Any suggestions? Based on your recommendation almost zeroed in on the Sony SRS D9. I want a 2.1 speaker set for gaming and movies. What do you suggest?

I like Robert's column very much. It's maybe because we share similar thoughts.

Thanks again Digit. This rig wouldn't have been possible without you.

–Darshan Singh Kali Rai

Wow! That's a sweet rig Darshan, congratulations! It's nice to see a true PC geek having fun building his own PC. My story is also something similar to yours and I too waited for a long time to build my dream

rig. Routing the cable over the motherboard isn't cause for worry. All you have to do is ensure the cable sheathing doesn't come in contact with any of the hot components and you should be fine. The Sony SRS D9 is a good 2.1 speaker system. We're pretty fond of one particular model from F&D – F680 – but it's hardly available anywhere these days. Another suggestion would be to look at 2.1 speakers that are a little higher in the price bracket to match the rest of your rig. For example the Swan M50. We haven't tried it yet but we've heard good things about it. Even the cheaper one in their lineup the – M10 – is pretty highly recommended and you won't have to stretch your budget by too much to get it. We'll be looking forward to a letter about your next rig as well!

–Mithun

1. Please try to give sports poster of sports personalities especially cricket or you can also give poster of various Hollywood's movie.
2. Please don't repeat your advertisements.
3. Why don't you change your DVD UI into android UI not an old apple look?

4. Can you give some comic trailers in DVD.
5. Try to increase the skoar pages and its content.
Can you tell me what to do to become gaming sketching artist in India? Can I get your past DVDs? How?

–Deepak Kumar

Thank you so much Deepak. I'll try to answer your questions below:

1. Sports is too far away from what we cover: technology. If however some game featuring sports personalities is all the rage sure, why not.
2. I don't recall any ad repeating in a single issue.
