

WHEN ANDROID AND PC UNITE

What if we told you that you can play all your favourite smartphone games... on your PC? No kidding!

We've all played mobile games at some point of time, be it the old time classic snake or the ever popular Angry Birds, mobile gaming has taken the world by storm. However, not everyone is comfortable with playing on a mobile device. There could be various reasons, maybe they're just more comfortable with their desktops or consoles, or maybe they have big fingers and their screens are too small, or perhaps they find the controls too hard and clunky, or they probably don't even have a smartphone to play on. Whatever be the reason, it's understandable that mobile gaming is not something that might appeal to everyone. But if you happen to be someone with any of the problems mentioned above but

really wanted to try out a mobile game, you've probably heard of and even tried and used the BlueStacks App Player.

The BlueStacks App Player allows you to emulate an Android device on your PC. So it's not just for games, but pretty much any app on the Android store can be used on your PC using the BlueStacks App Player. You can use it for messaging apps like WhatsApp and Hike, and you can even use apps like Facebook and Instagram, you name it, BlueStacks can run it. You would still need an actual mobile phone number

or active SIM card in order to use a lot of these apps as they require you to input your number and verify via SMS or some other means. But on the plus side it doesn't have to be an Android phone or even a smartphone for that matter. As long as you have an active mobile number you're free to use most of the apps on BlueStacks.

We got in touch with the CTO at BlueStacks, Suman Saraf to find out what led to the birth of BlueStacks. At the time, Android was relatively new, this was six years ago to be exact. Suman recalls that they were brainstorming what to do next and his daughter was playing on his phone. When Suman needed his phone back, she said she wanted to continue her game on her laptop. But as we all know,
