

GREED

For those who just want more than should be humanly allowed, we have enough to satisfy your hunger...

THIS MONTH: Huawei Maimang 5, ZTE Nubia Z11, LaFerrari Spider, Sky Ya, LG X Mach and a lot more...

TEMPTATION

If you're wondering what to do with yourself or how to spend some time getting cultured, this section is for you...

THIS MONTH: Movie Review: Batman vs Superman Ultimate Edition, American Gods, Legion

DESIRE > SHOWCASE

NVIDIA Titan X

A resurrected beast

Tangram

We live in amazing times where skipping ropes have become smart too. The Tangram rope consists of embedded LEDs that light up while jumping to notify you about your jump counts. Along with that, it will also track the calories burned and let you compete with your friends using a leaderboard. And the surprising bit is it's available in the Apple Store for \$89. So the next time you head over to get the latest iPhone, try this out!

People who bought spanky new GPUs for their gaming rigs a few months back, were left disappointed as NVIDIA and AMD both released their new architecture with an enormous jump in performance. While the battle between team red and team green rages on, we have already determined who is currently leading (head over to our Bazaar section to find out) the charts. It would be too soon to conclude the winner since AMD has completely immersed itself into VEGA mode and in an attempt to make team red go sweaty, NVIDIA has released their top end skew. Enter NVIDIA Titan X. But wasn't the older skew in the Maxwell architecture called Titan X as well? In a surprising

lack of creativity, they decided to simply call it NVIDIA Titan X rather than GTX Titan X. Weird! The top of the line GPU in the Pascal architecture, the Titan X will see a 24 percent rise in performance compared to the already powerful GTX 1080. With 11 teraflops of FP32 performance, it sees about 60 percent rise from

the older Titan X. It packs in 12 GB of GDDR5X memory and a new GP102 chip housing 3583 CUDA cores. Drawing in a maximum TDP of 250W using an eight-pin and six-pin PCIe connector, the GPU chip will run at a base clock of 1417 MHz and 1531 MHz boost clock. It's priced at \$1,200, or an approx ₹80,000.

S7 Olympic Edition

With the Olympic games around

the corner, Samsung has a new variant of their flagship smartphone the Galaxy S7 based on the international event.

3Doodler

3D printing pens sound cool and they are real. XYZprinting has

released the 3Doodler directed towards kids, selling at only \$50. This pen literally lets you draw on air, something very cool for a kid to have.

Energy XL

With big battery smartphones making its way, Blu has released

the Energy XL with a massive 5,020 mAh battery, claimed to last for about three days. Does it actually do so? We'll find out when we test it.

Roam-e

We've already seen drones capable of taking selfies for you, but the

Roam-e not only has built-in facial recognition technology, it also takes 360-degree panoramic photos. Who needs smartphone cameras anyway?
