

DESIRE

TAKE MY MONEY!

Here is where we keep an eye on crowd funded projects that will make you go 'Shut up and take my money!'

Capture Case

The Capture Case is an iPhone case which has Xenon flash built into it. It comes with its own individual battery and allows for Bluetooth connectivity. Xenon flash enables you to balance light in the foreground and background in order to get those perfectly lit images every time. Furthermore, the Capture Case is incredibly fast, allowing you to capture quality images at extremely high speeds as well. All this is packed into a slim package which will fit right into your pocket and it's light to boot. The Capture Case comes with a dedicated shutter button as well, for hassle-free photo-taking. There's not much to think about here, it's a must have for iPhone photography nuts and definitely worth checking out.

CASE

The CASE Remote Air is a smart camera controller. With this you can wirelessly control your camera via your smartphone or PC. All you need to do is connect the CASE Remote Air through your camera's USB and it generates a WiFi hotspot, to which you can connect with your smartphone or PC. It comes with functions like live-view, parameter editing, HDR, focus-stacking, and time lapse to name a few. When viewing through an iPad or other touch based devices it provides functions such as touch-focus and assistive scaling. If you aren't too fond of your camera's small preview screen, with the CASE you can view captured images on your device or PC immediately in full resolution. Furthermore, you can directly upload and share them using the Remote Air's WiFi hotspot. The CASE Remote Air lets you remotely set up your camera parameters from as far as 50 metres away. You can adjust the camera's aperture, shutter speed, ISO and much more from that very distance. It also comes with a built in app which is ideal for time lapse photography and focus-stacking among other things. You can do all this and more while connected to WiFi or even a 4G network. Who needs a selfie stick anyway?

ELF emmit

The ELF emmit is a wearable which incorporates neuroscience and the power of waves, rhythm and natural frequencies to actively influence the state of your mind. The ELF is an FDA Approved tech, which emits non-invasive pulses at specific frequencies to attain a desired state of mind whenever you so please. It uses a technology known as Pulse Electromagnetic Stimulation or PEMS for short, which incorporates and applies medical and neurological methods. The ELF emits pulses ranging from 2 Hz to 19 Hz and has five mood settings which are optimized to target the cerebellum and coax your brain into your desired mood. The five moods included are Concentrate, Anti-Stress, Deep Learning, Meditate and Sleep
